GLOBAL GEM SPONSORS

BABSON COLLEGE

Babson College is a founding institution and sponsor of the Global Entrepreneurship Monitor (GEM).

Located in Wellesley, Massachusetts, USA, Babson is recognized internationally as a leader in entrepreneurial management education.

U.S. News and World Report have ranked Babson #1 in entrepreneurship education for 21 consecutive years.

Babson grants B.S degrees through its innovative undergraduate program, and offers MBA and M.S degrees and certificate programs through its FW Olin Graduate School of Business.

Babson Executive and Enterprise Education is a dynamic learning laboratory, where clients, faculty, staff and partners work together to address real-world business challenges and create and capitalize on opportunities for our clients. Babson's student body is globally diverse, hailing from 47 U.S. states and 77 economies (non-U.S. students comprise more than 26% of undergraduates and 74% of full-time MBA students).

Students can choose from over 100 entrepreneurship courses offered each year taught by 42 tenure or tenure-track faculty, all with entrepreneurship experience; seven faculty from other divisions around the college; and highly accomplished business leaders serving as adjunct faculty.

Entrepreneurial Thought and Action (ETA) is at the center of the Babson experience, where students are taught to experiment with their ideas in real-life contexts, learning and adapting these as they leverage who and what they know to create valuable opportunities. 'Entrepreneurship of All Kinds' emphasizes that entrepreneurship is crucial and applicable to

organizations of all types and sizes, whether a newly launched independent start-up, a multigenerational family business, a social venture, or an established organization. Through an emphasis on Social, Environmental, Economic Responsibility, and Sustainability (SEERS), students learn that economic and social value creation are not mutually exclusive, but integral to each other.

The Babson Collaborative is a membership organization that brings together educational institutions seeking to build and grow entrepreneurship education for the betterment of our world. Babson shares its methodology and educational model with other institutions around the world through Babson Global, and in the process brings new knowledge and opportunities back to its campus.

Besides GEM, Babson has co-founded and continues to sponsor the Babson College Entrepreneurship Research Conference (BCERC), the largest academic research conference focused exclusively on entrepreneurship, as well as the Successful Transgenerational Entrepreneurship Project (STEP) - a global family business research project. Babson is home to The Diana Project™, which engages in research activities, forums and scholarship focusing on women entrepreneurs and their growth.

For more information, visit www.babson.edu

UNIVERSIDAD DEL DESARROLLO

True to the spirit and enterprising drive of its founders, the Universidad del Desarrollo is today one of the most prestigious universities in Chile. The project started 27 years ago in Concepción, a southern city of Chile, with 100 business administration students. Twenty seven years later, the facts speak for themselves. Its rapid growth has become an expression of the university's main

facet: entrepreneurship. The UDD MBA program is rated one of the best in South America and also as a leader in entrepreneurship education, according to *America Economía* magazine, an achievement that once again represents the 'entrepreneurial' seal that is embedded in the spirit of the university. Today the university has more than 13,500 undergraduates, 3,000 postgraduates and over 11,700 graduates from 26 careers that cover all areas of human knowledge. UDD also has 15 research centers in many disciplines. One of these research centers, the Entrepreneurship Institute of the School of Business and Economics, co-ordinates the GEM Chile project and is one of the most important research centers in South America dedicated to entrepreneurship studies.

UNIVERSITI TUN ABDUL RAZAK

Universiti Tun Abdul Razak (UNIRAZAK) was established on 18 December 1997 as one of the first private universities in Malaysia. The university was named after Malaysia's second prime minister, the late YAB Tun Abdul Razak bin Dato' Hussein, and was officially launched on 21 December 1998 by Tun Abdul Razak's eldest son, YAB Dato' Seri Mohd Najib bin Tun Abdul Razak, current prime minister of Malaysia. UNIRAZAK recognized the imperative for Malaysia's future entrepreneurs to equip themselves with the proper tools and expertise to survive and flourish in today's modern competitive economic climate.

Thus UNIRAZAK founded The Bank Rakyat School of Business and Entrepreneurship (BRSBE), a unique school dedicated to providing quality education in entrepreneurial and business leadership in Malaysia. BRSBE was formed with the view that entrepreneurial activity is one of the pillars of a strong and vibrant economy. Although big business is vital for economic health and prosperity, a strong cadre of SMLs and SMEs is also essential to ensure a diverse economy and to provide the required support to big business and the community. In fact, the dramatic economic development in Asia over the past two decades highlights the importance of understanding entrepreneurship in the region. In this regard UNIRAZAK, through BRSBE, is ideally poised to play both a national and regional role in developing entrepreneurship and meeting challenges unique to Asia.

KOREA ENTREPRENEURSHIP

FOUNDATION

The Korea Entrepreneurship Foundation (KoEF) is a non-profit organization established in 2010 with funding from Korean venture entrepreneurs and the Small and Medium Business Administration of Korea in order to foster entrepreneurship among the young generation. The primary goal of KoEF is nurturing and discovering young entrepreneurs by training talented students and people, so that it finally aims to contribute to a vibrant entrepreneurship culture in Korea. To achieve this, KoEF has been developing and offering several entrepreneurship education programs to as many people as possible. The teachers engaged in primary school to tertiary education are one of the important players in unleashing entrepreneurship when it comes to their impact to young people. KoEF has developed a series of programs for them so that they can play as the capable facilitators in the entrepreneurship ecosystem. There are also many direct programs for young people based on their ages, which contain case study, theory, game tools and activity. For those who have a special background, such as women trying to back on their career track, a North Korean defector in South Korea and a discharged soldier, KoEF offers appropriate programs coordinating with several organizations from public and private sector. To build a decent and sustainable entrepreneurship ecosystem, KoEF also devoted its resources to research and global networks. With the Korea Institution of Startup and Entrepreneurship Development (KISED) we have participated in the Global Entrepreneurship Monitor (GEM) since 2014. A research project, titled the Entrepreneurship Trend Report in Korea, offers credible statistics to help understand the status of entrepreneurship in Korea. In addition to this, the widespread network of resources are the KoEF's pride. The partnership with both public and private sectors allows KoEF to maintain the balanced perspectives. A wide range of overseas partnerships contribute to develop global programs for the young generation in Korea.

For more information visit www.koef.or.kr

NATIONAL GEM SPONSORS

More than 200 sponsors support national GEM surveys, including academic institutions, governments (ministries, agencies, international aid programs) and the business sector (banks and corporations). For the complete list of national sponsors, see Part 4.

MESSAGE BY THE CHAIRMAN

As part of the Global Entrepreneurship Monitor (GEM) team I am proud to introduce the new annual Global Report 2017/2018.

An important global trend that has been observed during the last few decades is that entrepreneurship activities continue to grow all over the world. In many countries in which the decision to start a new business was traditionally triggered by necessity, an increasing share of entrepreneurship is now triggered by opportunity. The new digital technologies can certainly explain a large portion of this shift. However, additional factors are the change in the attitude towards entrepreneurship as well as regulations imposed in different countries.

The global context is now different from the one that prevailed when the GEM project was launched. Thus, as the GEM consortium we face the challenge of constantly looking for

different ways to gather and process information about entrepreneurship. New formats and more customized reports, among other changes, have already been implemented.

In this Global Report for 2017/2018, a new Entrepreneurship Spirit Index has been introduced. This index makes it possible to compare countries with regard to entrepreneurial framework conditions, and is therefore very useful for policy decisions. This is a first step towards an Entrepreneurial Activity Index—now a work in progress. This will allow a comparison among countries from a broader perspective.

Many thanks to all the national teams that have contributed to this new Global Report 2017/2018, and especially to our sponsors Babson College, Universidad del Desarrollo, University Tun Abdul Razak, and the Korea Entrepreneurship Foundation, who support the work of the GEM Consortium.

Hernán Cheyre

Chairman, Global Entrepreneurship Research Association

PREFACE

The 2017 Global Entrepreneurship Monitor (GEM) report is the 19th consecutive global report that the GEM consortium has published as part of its worldwide research project since it was founded in 1997 by academics from Babson College and the London Business School. GEM provides a primary data based measurement and assessment tools of all forms of entrepreneurship and other socio-economic renewal derivatives, culminating in policy decisions and relevant recommendations for participating countries. The first report was launched in 1999 and included ten developed economies—eight from the OECD (Canada, Denmark, Finland, France, Germany, Israel, Italy and the United Kingdom) as well as Japan and the United States of America. GEM brings together hundreds of researchers and policy makers from across the globe and includes more than one hundred academic and government institutions every year. The involvement of all these individuals and institutions undoubtedly makes GEM the most comprehensive and collaborative study on entrepreneurship in the world. Since its inception, GEM has conducted research in close to one hundred countries. The 2017 GEM Global Report was conducted in fifty four countries. The GEM consortium strives to fulfil its various stakeholders' expectations.

First, GEM provides the most comprehensive information available on the very complex and essential phenomenon of entrepreneurship, economic growth, and innovation. Second, GEM offers data bases that serve as the basis for academic research and academic publications worldwide.

Third, GEM continuously investigates ways to gather primary source data using advanced technologies of data collection. Fourth, GEM provides policy recommendations that are of importance and relevance to decision makers at all levels of national and regional governments. Fifth, GEM collects and provides information in new formats, taking advantage of digital technologies, including social networks and Big Data. Finally, special reports are published during the year, including regionally focused reports. These reports echo the evolving and constantly changing entrepreneurship and innovation ecosystems. All the rich and expanded set of GEM's deliverables are available to the national teams, the various stakeholders and the general public in the following link <http://www.gemconsortium.org/>

The GEM's global community of scholars, practitioners and other stakeholders, who constantly benefit from GEM research in a variety of ways, is indebted to the founding institutions, Babson College and London Business School, as well as to the GEM's global sponsors: Babson College, Universidad del Desarrollo, Universiti Tun Abdul Razak and Korea Entrepreneurship Foundation (KEF).

The Association of GEM National Teams is fortunate to celebrate the commencement of GEM's third decade of a fruitful and exciting global research endeavour in the great city of Seoul, Korea, and look forward to its own evolution, growth and renewal.

Prof. Emeritus Ehud Menipaz

President, Association of GEM National Teams (AGNT)

EXECUTIVE SUMMARY

2017/18 GLOBAL REPORT

19TH

CONSECUTIVE
YEAR

54

WORLD
ECONOMIES
(individuals
between the
ages of 18
and 64 years)

APS: Adult Population Survey
NES: National Expert Survey

86.0%

OF THE
WORLD'S
GDP

67.8%

OF THE
WORLD'S
POPULATION

GEM tracks rates of entrepreneurship across multiple phases of entrepreneurial activity. Participating economies are grouped as follows:

5x WORLD REGIONS

Europe, North America, Latin American & Caribbean (LAC), Africa, Asia & Oceania.

3x ECONOMIC

DEVELOPMENT LEVELS*

FACTOR
DRIVEN

EFFICIENCY
DRIVEN

INNOVATION
DRIVEN

* Adapted from the World Economic Forum (WEF)

Economies in transition from factor- to efficiency-driven have been grouped with the factor-driven economies, while those in transition from efficiency- to innovation-driven have been included in the efficiency-driven category.

Societal Values About Entrepreneurship

ALMOST
70%

of the adult population across 52 economies believes that entrepreneurs are well regarded and enjoy high status within their societies.

ABOUT
61%

of adults in all 3 economic development groups believe that entrepreneurs receive substantial media attention (up from 60% in 2016)

Perceptions on
starting a business as
a good career choice:

64.6%
FACTOR DRIVEN
ECONOMIES

😊 **MOST POSITIVE PERCEPTIONS:** Africa

74.5% believe that entrepreneurs are admired in their societies.

65.7%
EFFICIENCY
DRIVEN
ECONOMIES

😞 **LEAST POSITIVE PERCEPTIONS:** Latin America and the Caribbean (LAC) & Europe

60.7% in LAC believe that entrepreneurs are admired in their societies

57.0%
INNOVATION
DRIVEN
ECONOMIES

58.5% in Europe believe entrepreneurship is a good career choice. They have the lowest media publicity for entrepreneurial activity at 54.3%

Self-Perceptions About Entrepreneurship

Percentage of adults who have positive perceptions about starting a business (aged 18-64)

Perceptions about starting a business across 3 economic development groups:

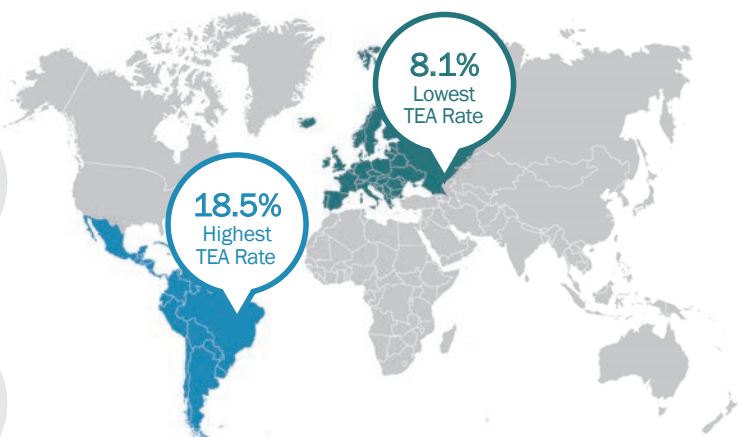

Phases/Types of Entrepreneurial Activity

The GEM survey monitors entrepreneurial activity by using 3 indicators:

TEA RATES are highest in Latin America and the Caribbean (LAC) and in Africa. Just under one fifth of working-age adults are engaged in early-stage entrepreneurial activity. TEA rates are **lowest** in Europe (8.1%)

EEA RATES

Lowest EEA rates

Africa 0.9%
LAC 1.6%

Highest EEA rates

North America 7.9%
Europe 4.4%
Asia and Oceania 3.1%

Motivation For Early-Stage Entrepreneurial Activity

74% of respondents stated that they had chosen to pursue an opportunity as a basis for their entrepreneurial motivations. The **lowest average opportunity motivation** is found in factor-driven economies: **67.6%**.

Regional opportunity motivation levels

Motivational Index

In 2017, there were **2.3x** as many improvement-driven opportunity entrepreneurs (IDO) as necessity-driven ones in factor-driven economies. Double the proportion of IDOs that was reported in 2016.

North America tops index with 5.2x as many improvement-driven opportunity entrepreneurs as necessity-driven entrepreneurs.

Business discontinuance

Business discontinuance rates in the factor- and efficiency-driven economies are on a par with one another

Reasons for discontinuance

#1: Lack of business profitability - consistently cited in 2015, 2016 and 2017 as the key reason for closing a business.

Impact of Entrepreneurial Activity

JOB CREATION PROJECTIONS

INNOVATION

The extent to which entrepreneurs are introducing products that are new to some or all customers, and that are offered by few or no competitors.

Average innovation levels increase with economic development level

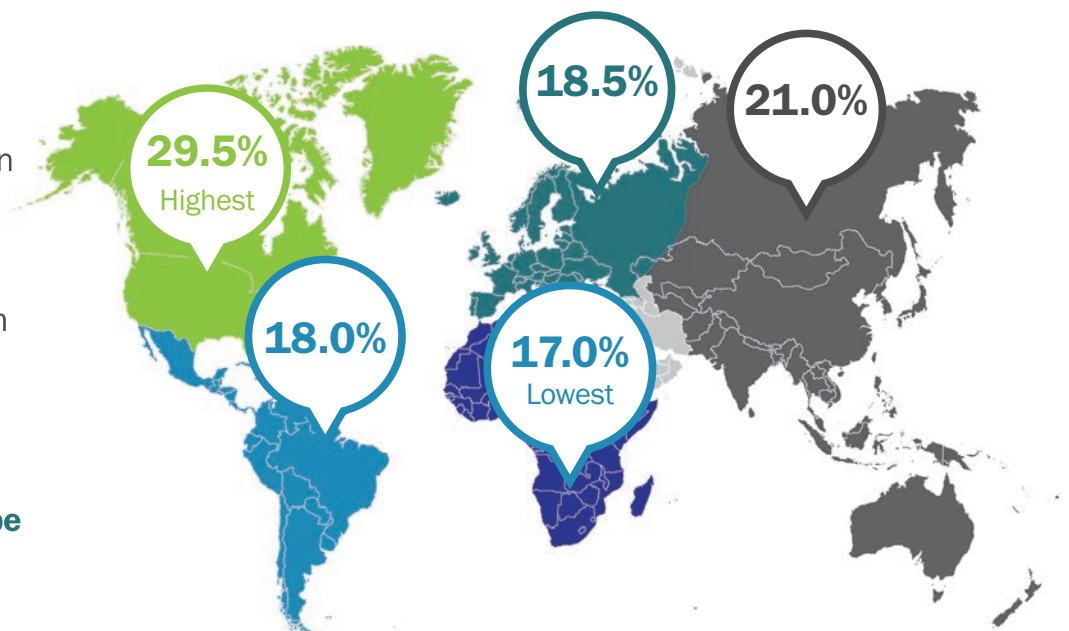

INNOVATION INTENSITY

Several economies show an encouraging trend of relatively high TEA rates coupled with robust levels of innovation. Lebanon ranked 4th overall in the GEM sample for both TEA and innovation levels.

Job creation prospects by region

The region with the highest proportion of entrepreneurs expecting medium to high job-creation (6 or more jobs in 5 years) opportunities is **North America (29.5%)**. The United States, in particular, stands out with 38.6% of entrepreneurs expecting to generate jobs. North America is followed by **Asia and Oceania at 21.0%**, **Europe at 18.5%**, and the region of **Latin America and the Caribbean at 18.0%**. **Africa** is at **17.0%**.

Gender Distribution Of Early-Stage Entrepreneurial Activity

The ratio of male to female participation in early-stage entrepreneurial activity varies considerably across the total sample of GEM countries, reflecting differences in culture and customs regarding female participation in the economy.

Globally,
the female to male ratio is

UP BY
6%

comparing the same set of countries (48) which participated in the GEM survey in both 2016 and 2017.

Highest average female TEA rates:

GENDER PARITY

Highest: Latin America and the Caribbean: 17 women engaged in early-stage entrepreneurship for every 20 male entrepreneurs

Lowest: Europe: 6 women for every 10 male entrepreneurs

Lowest average female TEA rates:

Across the board men are more likely to be entrepreneurs than women.

In just 3 economies, women report equal or higher entrepreneurship rates than men:

Ecuador
30.6%

Vietnam
24.8%

Brazil
20.7%

Age Distribution Of Early-Stage Entrepreneurial Activity

Entrepreneurs aged **25-34** and **35-44** are the most active entrepreneurs across all 3 development phases. In factor-driven economies the TEA rate of **55-64** year-old people (18.2%) is slightly higher than that of other age groups.

Age:

35-44

Most Active Entrepreneurs
Aged 35-44

25-34

Most Active Entrepreneurs
Aged 25-34

TOTAL ENTREPRENEURIAL ACTIVITY

North America has the **highest level of TEA** for the **25-34 year-old** age group, at **23.4%**.

Latin America and the Caribbean economies demonstrate the highest TEA for the **18-24 (16.5%)**, **35-44 (20.6%)** and **45-54 years old age group (17.9%)**.

Europe has the **lowest TEA of all regions** in all age groups.

YOUTH ENTREPRENEURSHIP

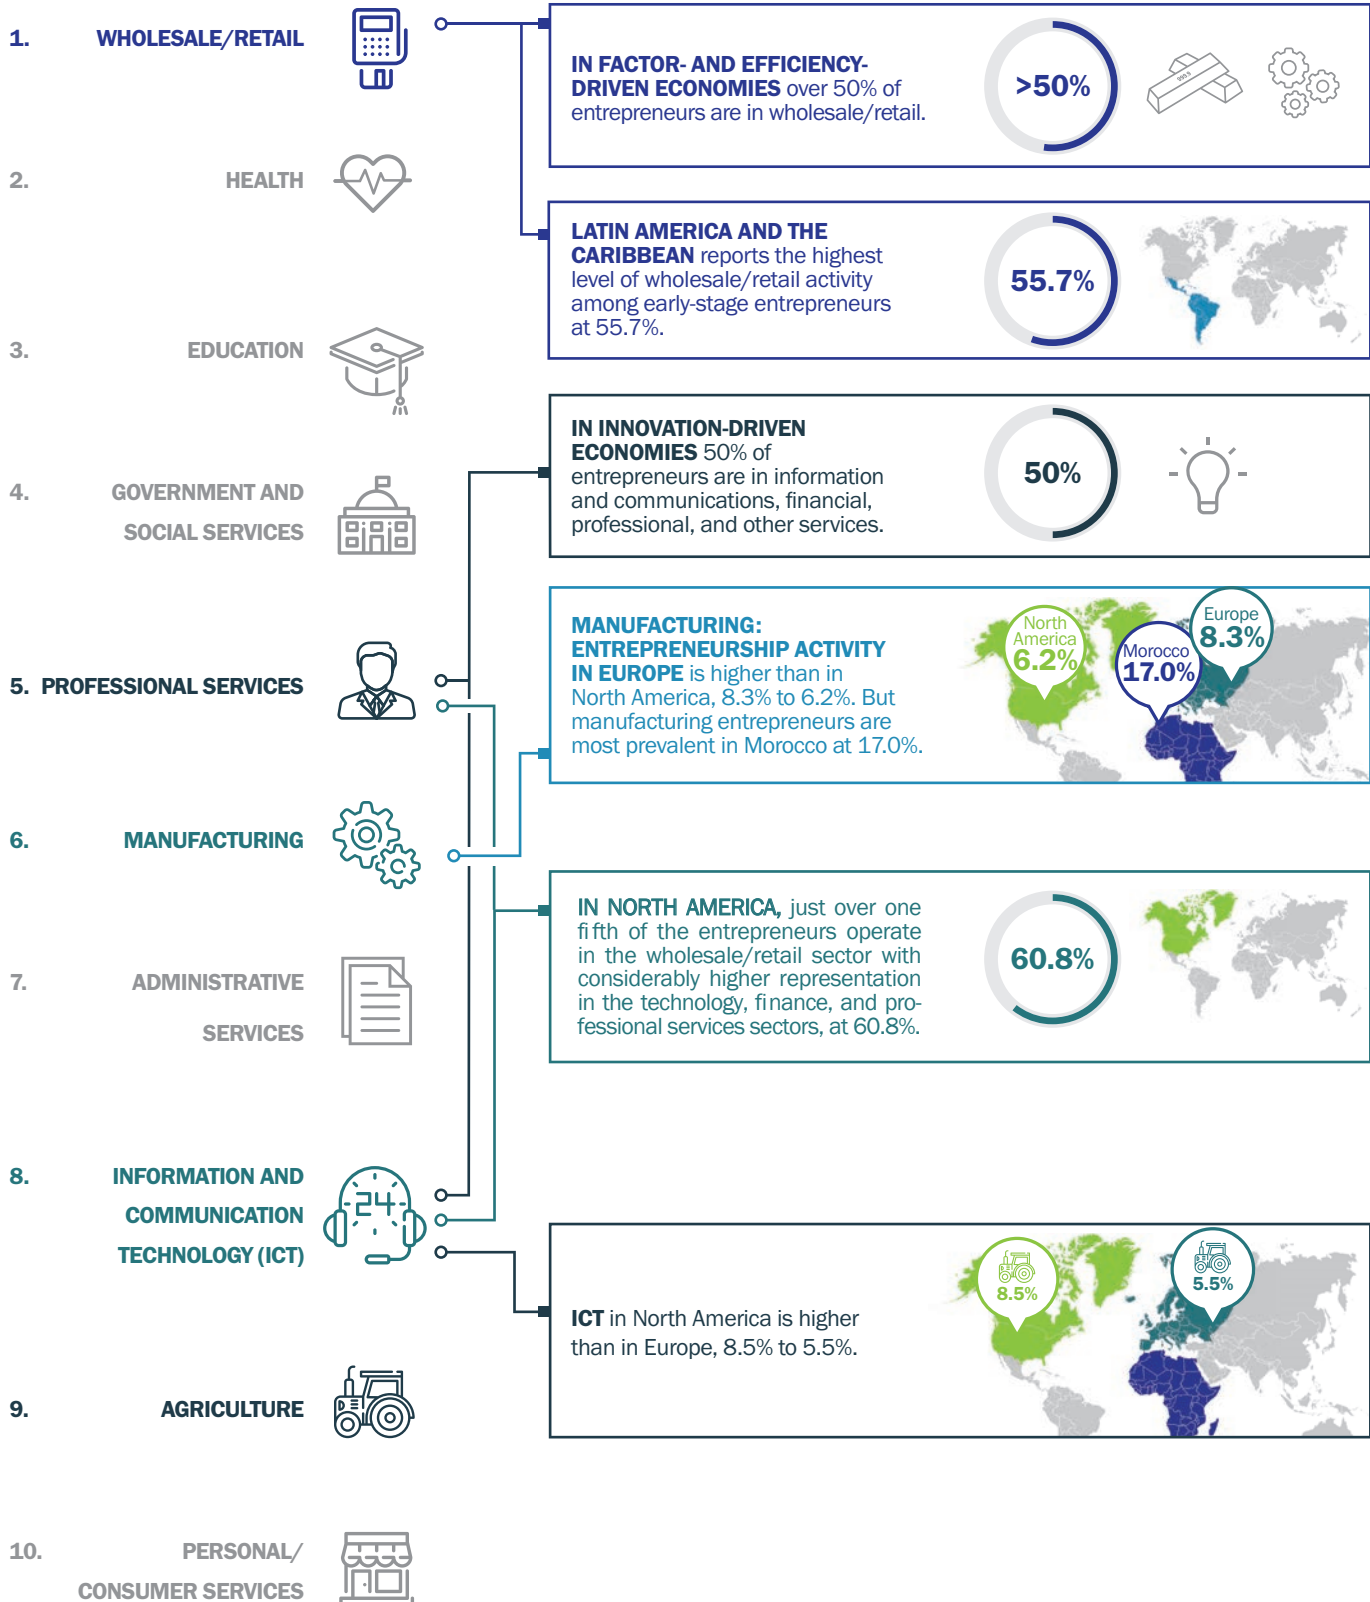

Latin America and the Caribbean region demonstrate the highest levels of **youth entrepreneurial activity (16.5%)**, followed by **North America** exhibiting a relatively high rate of **above 14%** in this age group.

Industry Sector Participation

10 industries identified by GEM

Entrepreneurship has the potential to disrupt industries, forcing significant changes in product and service offerings, new logistics processes, and new business models. Thus, the degree of entrepreneurs' participation in various industries is of importance.

GEM tracks entrepreneurs around the world in a variety of industries, assessing entrepreneurial activity in these industries.

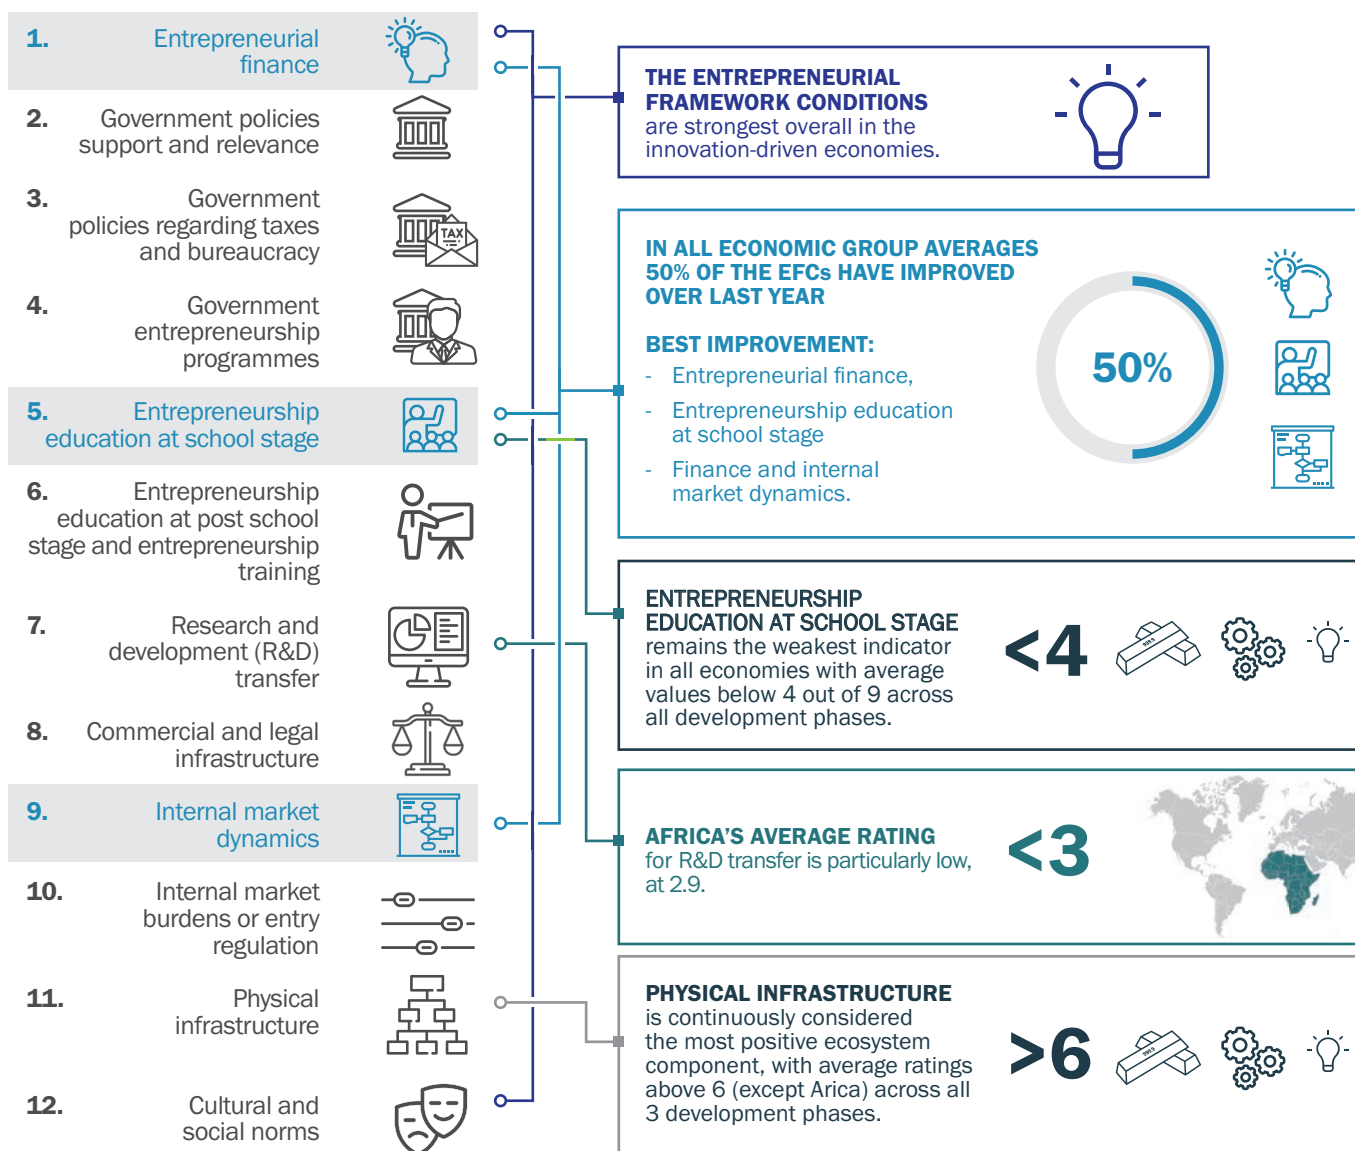

The Entrepreneurial Framework Conditions

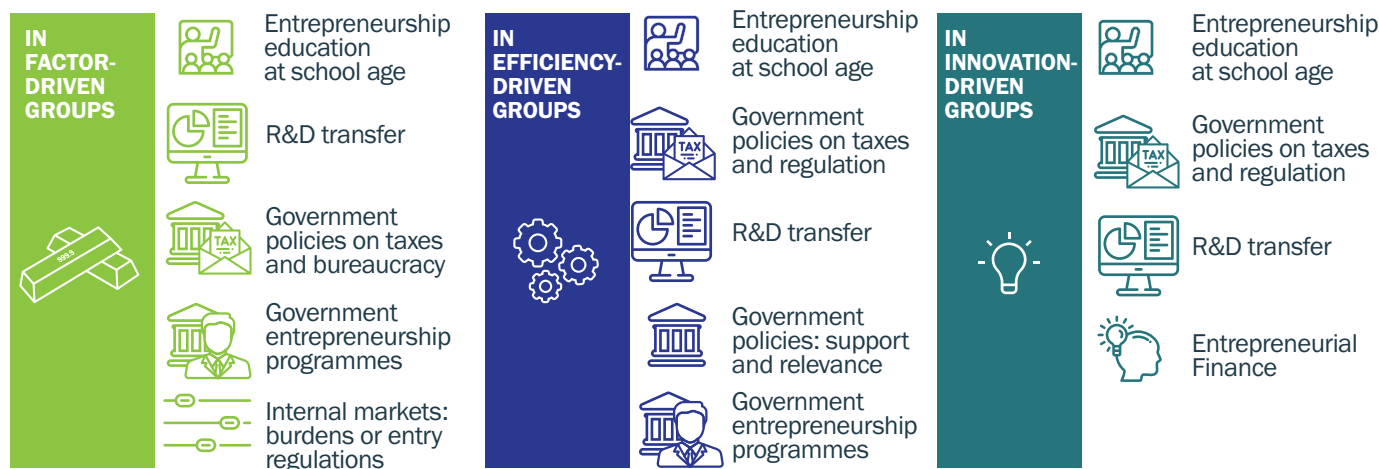

Based on the views of at least 36 key experts per participating economy.

The National Expert Survey (NES) focuses on the contextual factors that are expected to have a significant impact on the entrepreneurial attitudes and activities rather than on general economic factors.

In 2017, National Expert Surveys provided data on these components of the entrepreneurship ecosystem using a Likert scale of 1 (highly insufficient) to 9 (highly sufficient).

What Factors Constrain Entrepreneurship The Most?

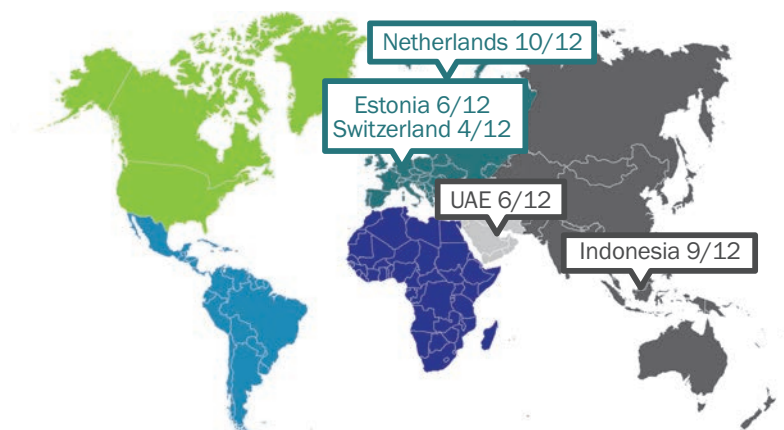

Most and Least Supportive

Entrepreneurial Framework Conditions and Regions:

North America has the most supportive entrepreneurial framework conditions with the least supportive being **Africa**, and **Latin America and the Caribbean** - both report average ratings below 4.0 for 8 out of 12 conditions and 6 out of 12 conditions respectively.

Top 5 Performers By Economy

Countries that need to significantly address one third to more than half of the 12 entrepreneurial framework conditions:

Croatia
Egypt
Iran
Morocco
Puerto Rico
South Africa
Uruguay

INTRODUCING GEM's Entrepreneurship Spirit Index (GESI)

This new index is based on a combination of three yes/no questions related to entrepreneurial awareness, opportunity perception, and entrepreneurial self-efficacy and is comparable across countries using data from the GEM APS.

Aiming to extract one measure that captures as much of the variance in response to these questions as possible, a principal component analysis is applied on collected GEM APS data across the total 2017 unweighted sample of 18–64 year-old adults for the 54 countries.

Using this approach, it was determined that 50% of the variance in individual responses for all GEM countries across these three questions can be captured in one Bartlett method measure using principal component analysis and this measure is used as the index.

When ranked from highest to lowest, the five top-ranked countries in the index are all efficiency-driven countries, and four of the five lowest-ranked countries are innovation-driven countries. However, three of the top 10 countries are innovation-driven and four of the bottom 10 countries are

efficiency-driven. Three of the four factor-driven countries have positive values in the index.

Thus, countries with a high and low entrepreneurial spirit may belong to any of the stages of economic development. Clustering countries according to economic development stages demonstrates the dominance of entrepreneurial spirit among efficiency-driven economies.

Countries in a descending order of GESI:

- | | |
|-----------------|-------------------------|
| 1. Saudi Arabia | 6. Kazakhstan |
| 2. Lebanon | 7. United Arab Emirates |
| 3. Indonesia | 8. Sweden |
| 4. Poland | 9. Colombia |
| 5. Peru | 10. Netherlands |

Further testing of GESI and derivatives are planned in the future.

INTRODUCTION

2017/18GLOBAL REPORT

The 2017 Global Entrepreneurship Monitor (GEM) survey represents the 19th consecutive year in which GEM has tracked rates of entrepreneurship across multiple phases of entrepreneurial activity, assessed the characteristics, motivations and ambitions of entrepreneurs and explored the attitudes societies have towards this activity. This report includes results based on 54 world economies completing the Adult Population Survey (APS) (individuals between the ages of 18 and 64 years) and 54 economies completing the National Expert Survey (NES).

The GEM countries in 2017 survey comprise 67.8% of the world's population and 86.0% of the world's GDP. The report classifies the participating countries in two ways, by geographic region and by economic development level ¹ (see **Figure 1**).

After the introduction which features the GEM conceptual framework and the dashboard of GEM indicators, the

report is structured in four parts. Part 1 presents the 2017 GEM indicators used for measuring entrepreneurship. Part 2 of the report features the country profiles for each participating economy, with numbers and rankings on key GEM indicators, as well as an assessment of entrepreneurial framework conditions. Part 3 contains data tables of the GEM indicators by economy and region. Part 4 contains a list of the national teams and their sponsors.

- 1 The classification of economies by geographic region is adapted from the United Nation's composition of the world's macro geographical regions. <http://unstats.un.org/unsd/methods/m49/m49regin.htm>. Classification of economies by economic development level is adapted from the World Economic Forum (WEF). According to WEF's classification, the factor-driven phase is dominated by subsistence agriculture and extraction businesses, with a heavy reliance on (unskilled) labour and natural resources. In the efficiency-driven phase, an economy has become more competitive with more-efficient production processes and increased product quality. As development advances into the innovation-driven phase, businesses are more knowledge-intensive, and the service sector expands (<http://weforum.org>). Economies in transition from factor- to efficiency-driven have been grouped with the factor-driven economies, while those in transition from efficiency- to innovation-driven have been included in the efficiency-driven category.

Shinjuku shopping district Tokyo, Japan.

Figure 1: GEM economies by geographic region and economic development level, 2017

	Factor- driven economies	Efficiency-driven economies	Innovation-driven economies
Africa	Madagascar	Egypt, Morocco, South Africa	
Asia & Oceania	India, Iran, Kazakhstan, Vietnam	China, Indonesia, Lebanon, Malaysia, Saudi Arabia, Thailand	Australia, Israel, Qatar, Republic of South Korea, Taiwan, United Arab Emirates, Japan
Latin America & Caribbean		Argentina, Brazil, Chile, Colombia, Ecuador, Guatemala, Mexico, Panama, Peru, Uruguay	Puerto Rico
Europe		Bulgaria, Bosnia & Herzegovina, Croatia, Latvia, Poland, Slovakia	Cyprus, Estonia, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Slovenia, Spain, Sweden, Switzerland, United Kingdom
North America			Canada, United States

THE GEM CONCEPTUAL FRAMEWORK

Specific contextual factors (social, political, and economic) are influential in creating unique business and entrepreneurial contexts. The relationships among the various key determinants of the entrepreneurial framework conditions – including the processes by which entrepreneurship, disruptive innovation in products and services, business renewal, job creation, economic expansion, and social wellbeing, among others – are depicted by the GEM's conceptual framework (see **Figure 2**).

The GEM conceptual framework is based on the assumption that national economic growth is the result of the inter-dependencies between the entrepreneurial framework conditions and the personal traits and capabilities of individuals to identify and seize opportunities. The GEM survey assists in identifying factors that encourage or limit entrepreneurial activity, measuring the extent of a variety of entrepreneurial activities and offering policy implications in order to enhance entrepreneurial capacity in local, regional and national economies.

GEM's approach is unique in several ways: First, it collects primary data on a global basis; secondly,

individuals are surveyed about a variety of key issues regarding entrepreneurial aspirations, attitudes, intentions and activities; thirdly, the entrepreneurship phenomenon is assessed along the entrepreneurship cycle, from concept of entrepreneurial opportunities to its maturity or, alternatively to its demise (see **Figure 3**).

DASHBOARD OF GEM INDICATORS

The dashboard of GEM indicators is based on the GEM conceptual framework featuring, on the one hand, the entrepreneurial framework conditions and, on the other hand, detailed key entrepreneurship measures. Overall, this group of measures provides a comprehensive set of variables that contribute toward the impact entrepreneurship has on a society and the extent society supports this activity. The following is a list of these measures:

Entrepreneurial Framework Conditions

The quality of the entrepreneurial framework conditions is based on the average value of experts' perceptions, using a Likert scale of one (highly insufficient) to nine (highly sufficient), for the following entrepreneurial framework components:

Figure 2: The GEM Conceptual Framework

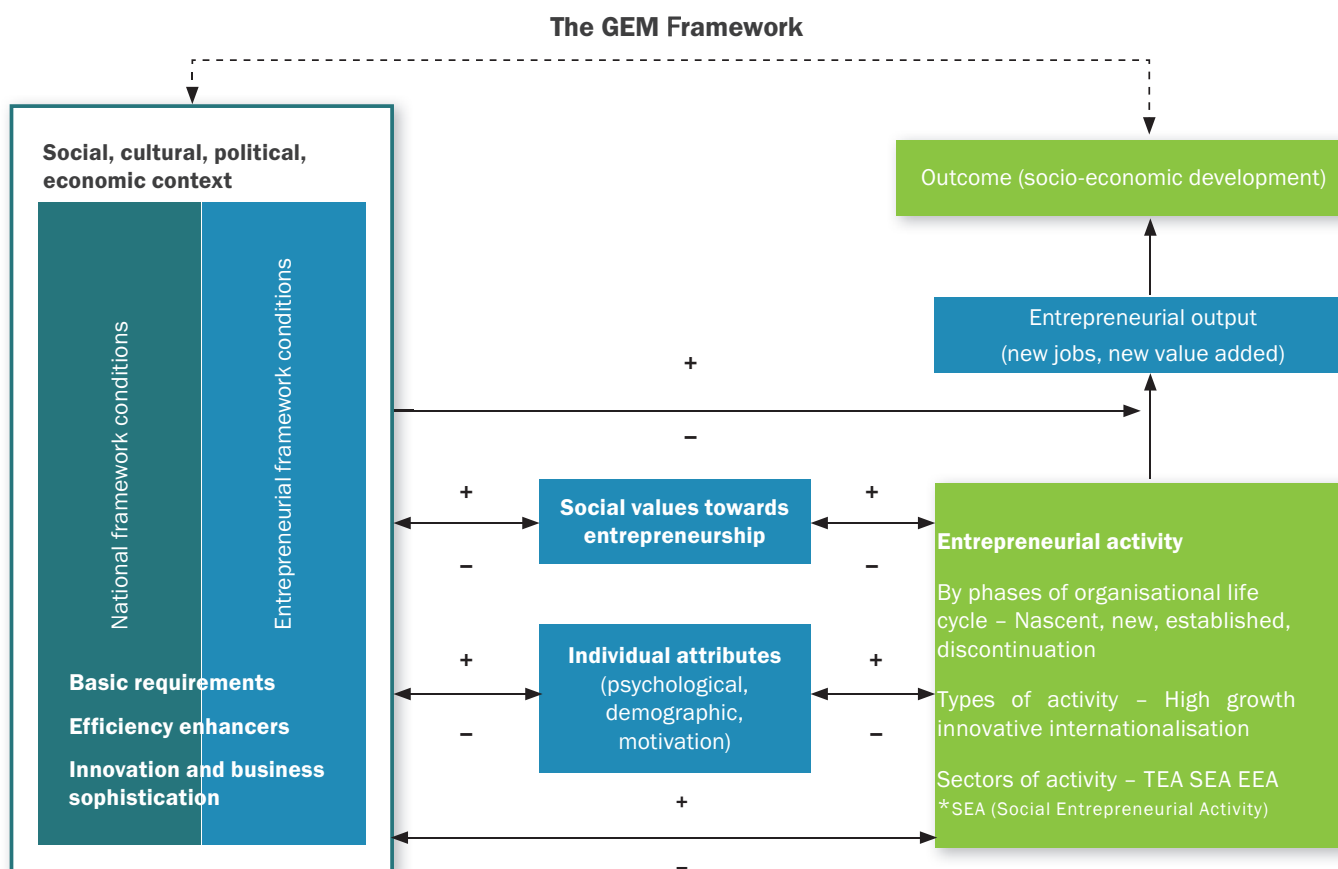

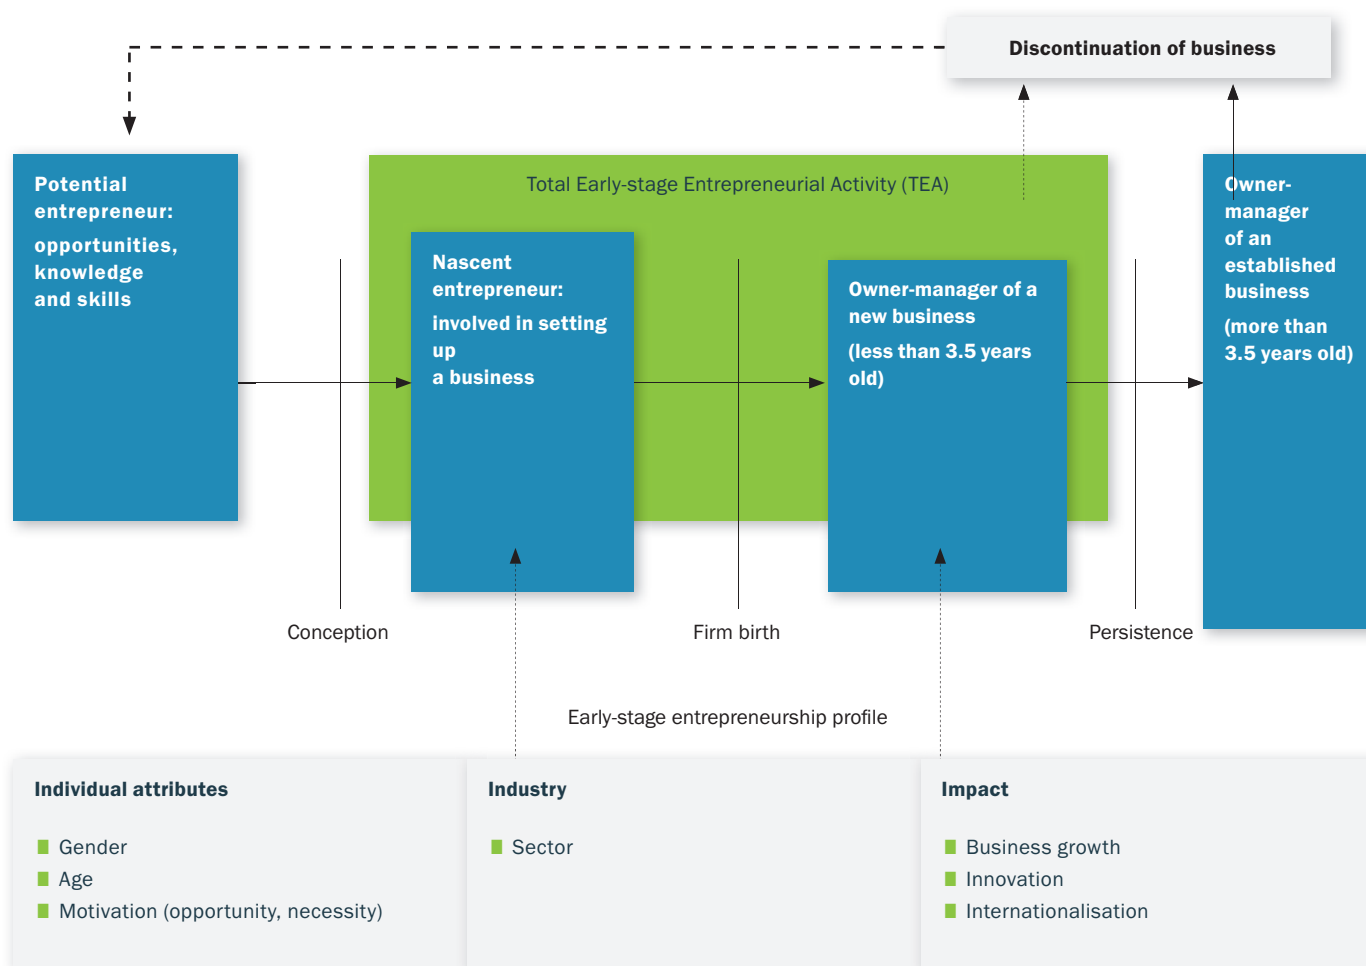

Figure 3: The entrepreneurial process and GEM operational definitions

- Entrepreneurial financing,
- Government policies: support and relevance, Government policies regarding taxes and bureaucracy,
- Government entrepreneurship programs,
- Entrepreneurship education at school stage, Entrepreneurship education at post school stage and entrepreneurship training,
- Research & Development (R&D) transfer,
- Commercial and legal infrastructure,
- Internal market dynamics, Internal market burdens or entry regulations,
- Physical infrastructure,
- Cultural and social norms.

Societal values and perceptions

Good career choice The percentage of the adult population between the ages of 18 and 64 years who believe that entrepreneurship is a good career choice;

High status of successful entrepreneurs The percentage of the adult population between the ages of 18 and 64 years who believe that high status is afforded to successful entrepreneurs;

Media attention for entrepreneurship The percentage of the adult population between the ages of 18 and 64 years

who believe that there is a lot of positive media attention for entrepreneurship in their country;

Individual attributes of a potential entrepreneur

Perceived opportunities The percentage of the population aged 18–64 years who see good opportunities to start a business in the area where they live;

Perceived capabilities The percentage of the population aged 18–64 years who believe they have the required skills and knowledge to start a business;

Entrepreneurial intention The percentage of the population aged 18–64 years (individuals involved in any stage of entrepreneurial activity excluded) who are latent entrepreneurs and intend to start a business within three years;

Rate of fear of failure The percentage of the population aged 18–64 years perceiving good opportunities who indicate that fear of failure would prevent them from starting up a business;

Gwanghwamun Gate, Gyeongbokgung Palace, Seoul, South Korea.

Entrepreneurial activity indicators

Total Early-stage Entrepreneurial Activity – TEA (The percentage of the adult population aged 18–64 years who are in the process of starting a business (a nascent entrepreneur) or started a business less than 42 months old before the survey took place (owner-manager of a new business). This indicator can be enriched by providing information related to motivation (opportunity vs. necessity), inclusiveness (gender, age), impact (business growth in terms of expected job creation, innovation, and industry sectors);

Established business ownership rate (The percentage of the adult population aged 18–64 years who are currently an owner-manager of an established business, i.e. owning and managing a running business that has paid salaries, wages, or any other payments to the owners for more than 42 months);

Business discontinuation rate (The percentage of the adult population aged 18–64 years that have discontinued a business in the past twelve months, either by selling, shutting down, or otherwise discontinuing an owner/management relationship with the business);

Entrepreneurial Employee Activity – EEA (The percentage of the adult population aged 18–64 years who, as employees, have been involved in entrepreneurial activities such as developing or launching new goods or services, or setting up a new business unit, a new establishment, or a subsidiary);

Social Entrepreneurial Activity – SEA (The percentage of the adult population aged 18–64 years who are engaged in early-stage entrepreneurial activities with a social goal).

Note: SEA is not measured every year; see website for SEA special topic reports (www.gemconsortium.org).

PART 1

ENTREPRENEURSHIP IN 2017: A GLOBAL PERSPECTIVE

2017/2018 GLOBAL REPORT

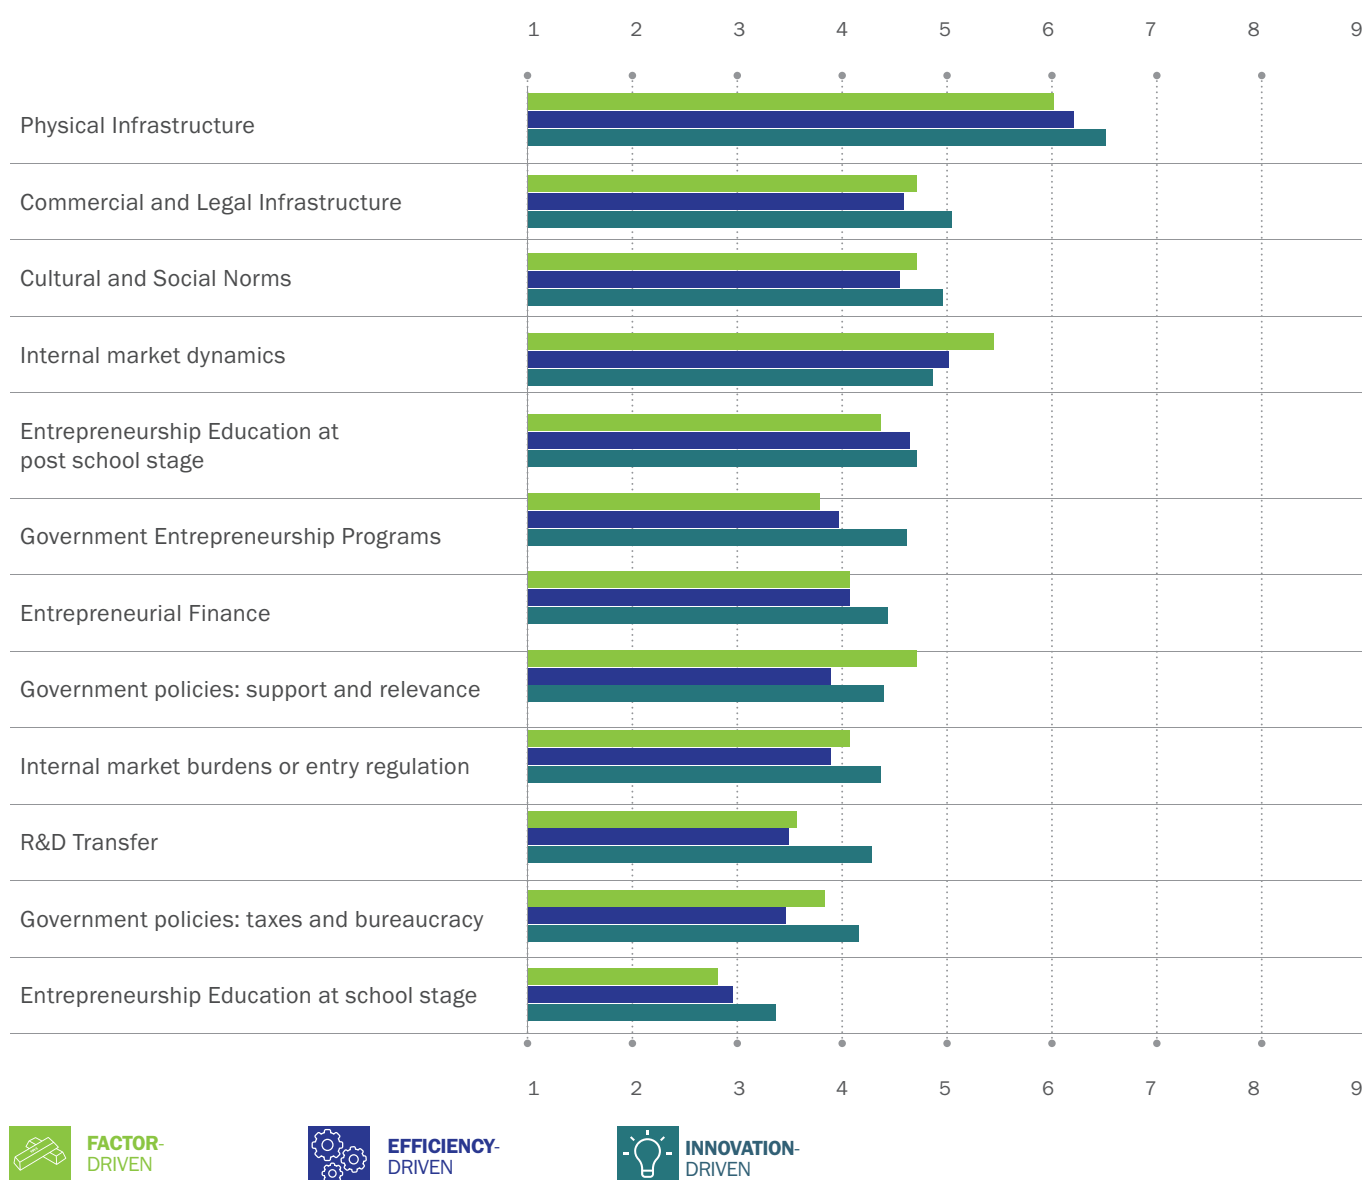

1.1 THE ENTREPRENEURIAL FRAMEWORK CONDITIONS

GEM conceptual framework identifies social, cultural, political and economic context in which individuals express their intentions and perform their entrepreneurial activities.

Annually, each economy participating in the GEM cycle surveys at least 36 key experts or informants. The National Expert Survey (NES) is similar to other surveys that employ expert judgments to evaluate specific national conditions. However, the NES focuses only on the environmental features that are expected to have a significant impact on the entrepreneurial attitudes and activities rather than on general economic factors. These environmental features define the GEM's entrepreneurial framework conditions. Experts are asked to express

their views about the most important conditions that can either foster or constrain entrepreneurial activity and development in their country. In 2017, National Expert Surveys provided data on these components of the entrepreneurial framework conditions using a Likert scale of one (highly insufficient) to nine (highly sufficient) (see **Figure 4**).

Figure 4: Development phase averages for entrepreneurial framework conditions for 54 economies, GEM 2017 – average scores

FACTOR-DRIVEN

EFFICIENCY-DRIVEN

INNOVATION-DRIVEN

Globally, education at school stage, government policies related to taxes and bureaucracy and R&D transfer have a more hindering than stimulating impact on entrepreneurial activity in 2017 as was the case in 2016 (with average scores below 4).

In most cases, entrepreneurial framework conditions are better evaluated in innovation-driven economies than in other economies. Factor-driven economies are leading in internal market dynamics and relevance of government policies for entrepreneurship. Improvements in 2017 compared to 2016 are observed in eight components in both factor- and efficiency-driven economies, and only four in innovation-driven economies. Two components (entrepreneurship education at school stage and internal market dynamics) have shown an improvement in all three economic group averages (see **Table 1.1**). Support and relevance of government policies—another essential component to boost entrepreneurship and innovation—was improved in factor-driven and efficiency-driven economies but not in innovation-driven economies.

Only the efficiency-driven economies reported improvements in government entrepreneurship programs, even though policy makers in most countries are aware of the need to create such government programs. The lack of reported progress in government entrepreneurship programs may be because policy decisions should be complemented with appropriate implementation and monitoring processes.

The post-secondary education component was improved in both innovation- and efficiency-driven economies but not in factor-driven economies. R&D transfer, commercializing research by universities and research government agencies, is important to boost entrepreneurship and innovation. However, only factor-driven and efficiency-driven economies reported improvements for this component.

Commercial and legal infrastructure was improved only in efficiency-driven economies and internal market burdens or entry regulations only improved in factor-driven economies. This is currently of particular interest since fundamental geopolitical changes affect internal market burdens as well as entry regulations in many regions and countries.

Table 1.1: Development phase averages for entrepreneurial framework conditions for 54 economies, GEM 2017 compared to GEM 2016 – average scores*

Entrepreneurial Framework Conditions	Factor-driven average 2017	Efficiency-driven average	Innovation-driven economies	GEM average 2017
Entrepreneurial access to financing	4.2*	4.1	4.5	4.3
Government policies: support and relevance	4.8	4.0	4.5	4.3
Government policies: taxes and bureaucracy	3.9	3.5	4.2	3.9
Government entrepreneurship programs	3.9	4.0	4.7	4.3
Entrepreneurship education at school stage	2.9	3.0	3.5	3.2
Entrepreneurship education: post-school stage	4.5	4.8	4.8	4.8
R&D transfer	3.6	3.6	4.4	3.9
Commercial and legal infrastructure	4.8	4.7	5.1	4.9
Internal market dynamics	5.6	5.1	5.0	5.1
Internal market burdens or entry regulation	4.1	4.0	4.5	4.2
Physical infrastructure	6.1	6.3	6.6	6.5
Cultural & social norms	4.8	4.6	5.1	4.8

*Blue coloured averages indicate ecosystem improvement relative to 2016

(Comparison is based upon all participating countries in 2016 and 2017)

Only factor-driven economies report improvement in physical infrastructure, which is continuously considered the most positive entrepreneurial framework condition, with average ratings above 6 across all three development phases.

Cultural and social norms as part of the entrepreneurial framework conditions improved in innovation- and factor-driven economies. For detailed eco-system measures consult **Tables 11-23, Part 3.**

The entrepreneurship ecosystem is strongest overall in the innovation-driven economies. In both factor- and efficiency-driven groups, despite improvements that are reported in some components, several unfavourable conditions are reported (with average ratings lower than 4.0).

In factor-driven economies, R&D transfer, entrepreneurship education at school age, government entrepreneurship programs and government policies on taxes and bureaucracy are highlighted as areas constraining entrepreneurship. However, as was noted earlier, last year's low rankings in finance and internal market burdens/ entry regulations improved and are now over the 4.0 benchmark.

In efficiency-driven economies, the constraining components are the following: Internal market burdens or entry regulations, R&D transfer, entrepreneurship education at school stage, government programs, government policies on taxes and regulation and relevance of government policies.

In innovation-driven economies, the only component rated very low, at less than 4.0, is entrepreneurship education at school stage.

Ratings for government programs for entrepreneurship show wide variation between economic development levels – both factor- and efficiency-driven economies give this EFC low ratings of 3.9 and 4.0 respectively, while the innovation-driven average is 4.7. On the other hand, ratings for post-school entrepreneurship education and internal market dynamics are very similar across the phases of economic development.

From a regional perspective, North America has the most supportive entrepreneurial framework conditions while Africa as well as Latin America and the Caribbean struggle with the least favourable entrepreneurship environment. The latter two regions both report average ratings below 4.0 for financing of entrepreneurial ventures, school-level entrepreneurship education, R&D transfer, internal market burdens or entry regulations, relevant government policies, government policies on taxes and bureaucracy. Africa's average rating for R&D transfer is particularly low, at 2.9. Entrepreneurship education at school is also particularly weak in these two regions, with scores below 3.0 (2.1 for Africa and 2.7 for Latin America and the Caribbean).

Among individual economies, a few stand out for high ratings across most components of the entrepreneurial framework conditions. The year 2017 has witnessed some unique changes in the countries that have improved and accommodated an appropriate entrepreneurship environment. It must be noted that even with the most accommodating context, it may take time until the full impact of the ecosystem becomes apparent. Checking the five top-ranking countries for ecosystem component frequency, the Netherlands reported the highest values in the sample for 10 out of 12 ecosystem components observed. Indonesia

Figure 5: Development group averages for societal values about entrepreneurship in 52 economies*
GEM 2017 – percentage of population aged 18 – 64 years

has nine such highly-rated conditions, United Arab Emirates demonstrated six, Estonia had six and Switzerland had four such components. The entrepreneurship environment analysis points to the countries that need to significantly address one third to more than half of the 12 entrepreneurial framework conditions. Among these countries are Croatia, Egypt, Iran, Morocco, Puerto Rico, South Africa, and Uruguay.

1.2 ENTREPRENEURSHIP SOCIETAL VALUES AND SELF-PERCEPTION

Societal values and self-perception of one's own abilities to identify and pursue opportunities have important roles in deciding whether to be entrepreneurially active.

1.2.1 Societal values about entrepreneurship

Across 52 economies around the world, 70% of the adult population believes that entrepreneurs are well regarded and enjoy high status within their societies which is at the same level as it was in 2016. Around 61% of adults in all three economic development groups believe that entrepreneurs garner substantial media attention. This is marginally more than last year's score of 60%.

On average, two-thirds of the adult population in the factor-driven and the efficiency-driven economies consider starting a business a good career choice, compared to 64% in the factor- and 57% in the innovation-driven economies. As with last year, Africa reports the most positive attitudes towards

entrepreneurship; three-quarters (76.2%) of working-age adults consider entrepreneurship a good career choice and 74.5% believe that entrepreneurs are admired in their societies (See **Figure 5**).

However, Africa demonstrates a lower score (60.1%) for media attention for entrepreneurship. Latin America and the Caribbean reports the lowest proportion of adults who believe that entrepreneurs are highly regarded (60.7%), lower than last year, while Europe demonstrated the lowest belief in entrepreneurship as a good career choice (58.7%) and the lowest media publicity for entrepreneurial activity (54.3%). The findings regarding Europe seem to be almost unchanged compared to last year's results.

1.2.2 Self-perceptions about entrepreneurship

In 2017 there seem to be no significant change in perceived opportunities, capabilities and entrepreneurial intentions to start a venture worldwide, but a moderate increase in the fear of failure, compared to 2016 (see **Figure 6**).

Regionally, the highest rate of perceived opportunities in 2017 was noted in the region of North America (61.9%), consistent with the GEM 2016 survey. The region of Latin America and the Caribbean is ranked second among all regions of the world regarding perceived opportunities, at 44.9%, followed by the regions of Asia and Oceania, at 44.2% and Europe at 41.4%. Compared to 2016, Africa is in 2017 ranked again the lowest; 37.2% of the adult-age population believe that there are good opportunities to start a business.

Figure 6: Development group averages for self-perceptions about entrepreneurship in 54 economies, GEM 2017 – percentage of population aged 18 – 64 years

Lines of the yellow Ambassador taxi cabs and buses on the road of Kolkata, India.

Regional differences are much lower with respect to perceived capabilities (from 58.8% in Latin America and Caribbean to 43.4% in Europe) and fear of failure (from 40.4% in Asia and Oceania to 30.5% in Latin America and Caribbean). It is interesting to note differences among countries – e.g. in the Asia and Oceania region, there are countries, with high perceived capabilities, such as Lebanon, which is ranked first in the overall sample on this measure, and Saudi Arabia, which is ranked third. However, in the same region, China, Taiwan, and Japan, are ranked the lowest in perceived capabilities, in the 52nd, 53rd, and 54th place respectively.

Looking at economic development groups, in all three groups, less than 45% of adults see good opportunities for starting a business within the next six months. A similar proportion of adult population, about 55%, both in factor-driven and efficiency-driven countries, seem to have appropriate entrepreneurship capabilities, but 43% of surveyed adult population indicate appropriate perceived capabilities in innovation-driven countries. As to fear of failure, the highest proportion of adults, just over 40%, is reported in innovation-driven countries, possibly because there are more lucrative alternative forms of employment than being entrepreneurs. The readings on fear of failure are much lower in factor-driven and efficiency-driven economies, with less than one third of the working age adult population indicating that fear of failure will stop them from pursuing entrepreneurial ventures.

Based on their belief that combining indicators of entrepreneurial self-perceptions would be more impactful than their individual values, the Research and Innovation Advisory Committee (RIAC) worked on the GEM Entrepreneurial Spirit Index, as a composite index combining three self-perception dimensions (entrepreneurial awareness, opportunity perception and entrepreneurial self-efficacy).

GEM'S ENTREPRENEURIAL SPIRIT INDEX (GESI) – NEW GEM INDICATOR (WORK IN PROGRESS)

This report launches the GEM's Entrepreneurship Spirit Index (GESI), which captures and integrates several important components of the GEM conceptual framework (**Figure 2**) in a single index, by using the present structure of data collected by the GEM Adult Population Survey (APS). The index is based on a combination of three polar questions related to entrepreneurial awareness, opportunity perception, and entrepreneurial self-efficacy and is comparable across countries. The three questions that serve as a basis for GESI are as follows. First, whether the respondent knows someone who has started a business in the past year (entrepreneurial awareness). Second, whether the respondent thinks there are good opportunities for starting a business in their local area (entrepreneurial opportunity perception). Third, whether the respondent thinks they have the knowledge, skills, and experience to start a business (entrepreneurial self-efficacy). Aiming to extract one measure that captures as much of the variance in responses to these questions as possible, a principal component analysis was applied on collected GEM APS data across the total 2017 unweighted sample of 18–64 year-old adults for fifty four economies. Using this approach, it was determined that 50% of the variance in individual responses for all GEM countries across these three questions can be captured in one Bartlett method measure using principal component analysis. This measure is used as the index. The factor score is presented as a numerical value **indicating a country's relative spacing or standing on the "entrepreneurial spirit" (the latent factor, common to data set)**. Countries with higher factor score are those for which the three underlying variables (entrepreneurial awareness, opportunity perception and entrepreneurial self-efficacy) are also high.

When ranked from highest to lowest (see **Figure 7**), the five top-ranked countries in the index are all efficiency-driven countries, and four of the five lowest-ranked countries are innovation-driven countries.

However, three of the top ten countries are innovation-driven and four of the bottom ten countries are efficiency-driven. Three of the four factor-driven countries have positive values in the index. Thus, countries with a high and low entrepreneurial spirit may belong to any of the stages of economic development.

Clustering countries according to economic development stages demonstrates the dominance of entrepreneurial spirit among efficiency-driven economies (see **Figure 8**). The following presents the innovation-driven countries in a descending order of GESI: United Arab Emirates, Sweden, Netherlands, Israel, Estonia, Canada, USA, Australia, Cyprus, and Luxemburg. Further testing of GESI and derivatives are planned in the future.

Figure 7: The Entrepreneurial Spirit Index

Figure 8: The Entrepreneurial Spirit Index, across development stages

1.3 MEASURING ENTREPRENEURSHIP

Based on the GEM paradigm, the GEM survey monitors entrepreneurial activity by using three indicators: Total early-stage entrepreneurial activity (TEA), the proportion of established businesses (EB) among the respondents and entrepreneurial employee activity (EEA). The averages of these three indicators are noted and reflect the existence of different patterns of entrepreneurial activity. These measures are reported based on both regional (see **Table 3, Part 3**) and economic development level basis (see **Figure 9**).

1.3.1 Total Early Stage Entrepreneurship Activity (TEA)

As was the case for the year 2016, the average TEA rate for the factor-driven economies in 2017, is almost double that for the innovation-driven economies (16.4% compared to 9.2%) (see **Figure 9**). The same applies to the rate of established businesses (15.7% compared to 6.8%). Differences in TEA rates is lowest among economies in the innovation-driven economies, and highest among efficiency-driven economies. (see **Figure 10**) At a regional level, TEA rates are highest in Latin America and the Caribbean and in Africa. In these two regions, just under a sixth of working-age adults are

Figure 9: Development phase averages for total early-stage entrepreneurial activity (TEA), employee entrepreneurial activity (EEA), and established business (EB) ownership in 54 economies, GEM 2017 – percentage of population aged 18 -64 years.

Panama City skyscrapers, Panama.

Street market in Nairobi, Kenya.

engaged in early-stage entrepreneurial activity. In line with its lowest entrepreneurial intention rate (10.8%, **Table 2, Part 3**), Europe reports the lowest average regional TEA rate –half the rate for North America region (see **Table 3 in Part 3**).

1.3.1.1 Motivation for early-stage entrepreneurial activity

A primary objective of GEM is to explore differences in national levels and types of entrepreneurship and to link these to job creation and economic growth. The relative prevalence of opportunity-motivated versus necessity-motivated (no other options for work) entrepreneurial activity provides useful insights into the quality of early-stage entrepreneurial activity in any given economy.

Most entrepreneurs around the world are opportunity-motivated. On average, three-quarters

of respondents in the 2017 survey as well as in the 2016 survey stated that they had chosen to pursue an opportunity as a basis for their entrepreneurial motivations. The factor-driven economies reported the lowest average opportunity-motivation. On a regional basis, opportunity-driven entrepreneurs are most prevalent in North America, with more than 82% of working age population falling into this category. This is followed by Europe (75.4%), Asia and Oceania (74.4%), Latin America and the Caribbean and Africa (71.7%) (see **Table 5, Part 3**). Regionally speaking, the region that leads the way in the motivational index is North America, with 5.2 as many improvement-driven opportunity entrepreneurs as necessity-driven entrepreneurs. This region is followed by Europe (3.4), Asia and Oceania (3.2), Latin America and the Caribbean (2.2), and Africa (1.5) (see **Table 5, Part 3**).

Figure 10: Total early-stage entrepreneurial activity in 54 economies, grouped by phase of economic development, GEM 2017

Figure 10: Continued

Table 1.2: Development phase averages for TEA, by gender, in 54 economies, GEM 2017

Stage of economic development	Male TEA (% of adult male population)	Female TEA (% of adult female population)	Ratio of female/ male TEA	Male TEA necessity (% of male TEA)	Female TEA necessity (% of female TEA)	Ratio of female/ male TEA necessity
Factor-driven	16.6	16.2	0.98	23.8	23.2	0.97
Efficiency-driven	16.9	12.8	0.76	23.2	30.9	1.33
Innovation-driven	11.3	7.1	0.63	16.1	19.1	1.19

1.3.1.2 Gender Distribution of early-stage entrepreneurial activity

A consistent finding in 2017 as with previous years is that men are more likely to be involved in entrepreneurial activity than women (see **Table 1.2**), regardless of the level of economic development, which reflects differences in culture and customs regarding female participation in the economy.

A positive shift in the female/male ratio of participation in early-stage entrepreneurship activity happened in factor-driven economies, measured by changes in these economies participating both 2016 and 2017 (from 0.63 in 2016 to 0.79 in 2017). At this development stage, there exists a balanced proportion of women and men entering early entrepreneurial activity out of the necessity, in comparison with other two stages in which women are more frequently pushed to do it by necessity. However, in 2017, the highest average female TEA necessity rates are in efficiency-driven economies at 30.9%, and not in factor-driven economies as in 2016. While this observation requires further analysis, it may mean that the increase in female TEA rates in the factor-driven economies is coupled with a change in the women's entrepreneurship motivation. In other words, more women entrepreneurs are opting for opportunity-based entrepreneurial ventures.

From a regional perspective (see **Table 8, Part 3**), the region of Latin America and the Caribbean has the highest average female TEA rates (17.0%) for the second year in a row, followed by North America (12.8%). The Latin America and the Caribbean region also show the highest level of gender parity, with seventeen women engaged in early-stage entrepreneurship for every twenty male entrepreneurs. Europe reports the lowest female involvement in early-stage entrepreneurial activity (6.0%). The lowest levels of gender parity are in the African region (0.59) and Europe (0.60), followed by North America (0.65) – women in those regions are only two-thirds or less as likely to be engaged in TEA as their male counterparts.

In several economies, women report equal or higher

entrepreneurship rates than men: Kazakhstan (11.3% vs. 11.4%), Qatar (7.4% vs. 7.4%), Vietnam (24.8% vs. 21.7%), Ecuador (30.6% vs. 28.7%) and Brazil (20.7% vs. 19.9%). The countries with the highest level of opportunity-motivated female TEA are Poland at 90.7%, Malaysia at 90.2%, and the USA at 88%.

During both 2016 and 2017, women were more likely to start businesses out of necessity, compared to men, in all regions, except in North America in 2017. The North America region is the only region in which women are more frequently entering entrepreneurial activity out of opportunity, comparing to men (female/male ratio is 1.02). Narrowing the gender gap in terms of entrepreneurial activity remains a priority focus for policy makers in all economies.

1.3.1.3 Age distribution of early-stage entrepreneurial activity

The highest prevalence of entrepreneurial activity is among those aged 25–34 years and 35–44 years across all three development phases. (see **Figure 11**).

The lowest differences among age groups are found in factor-driven economies, confirming that starting a business is an important avenue to be included in the economy for all people. The double rate of early entrepreneurial activity among the 18-24 year olds in factor-driven economies (16%) compared to innovation-driven economies (8%) could be further analysed by using data on involvement of young people in tertiary education, as well as including data on the motivational index (ratio of improvement-driven opportunity to necessity).

At the regional level, Latin America and the Caribbean region demonstrate the highest levels of youth entrepreneurial activity (16.5%), followed by North America exhibiting a relatively high rate of above 14% in this age group. North America has the highest level of TEA for the 25–34 year-old age group, at 23.4%. Latin America and the Caribbean

Figure 11: Development phase averages for TEA rates by age group in 54 economies, GEM 2017

economies demonstrate the highest TEA for the 35–44 (20.6%) and 45–54 years old age group (17.9%). Europe has the lowest TEA of all regions in all age groups.

1.3.2 Established business ownership

As can be seen in **Figure 9**, established business ownership is highest in the factor-driven group of economies at 15.7%. This is most probably due to the larger base of people starting businesses in many of these economies. The rate of established businesses in efficiency-driven and innovation-driven economies is half or lower the rate in the factor-driven economies; the established business ownership rate in efficiency-driven economies is 8.9%, while in the innovation-driven economies it is 6.8%.

From a regional perspective, Africa reports the highest established business rate (11.9%). In this region, high TEA rates translate into a high-established business rate. In other regions, established business rates are lower and this pattern is quite stable comparing to 2016. In 2017, the following readings are noted: Asia and Oceania at 9.7%, Latin America and the Caribbean at 8.3%, and Europe and North America at 7.0%. In addition, variability within regions is noted. For example, in Africa, the rate of established businesses is as low as 2.2% in South Africa and as high as

29.4% in Madagascar. In Asia and Oceania, the rate may be as high as 33.2% in Lebanon, and as low as 1.3% in Qatar. Europe shows low variability in established business rates, from a high of 12.4% in Greece to a low of 1.4% in Bosnia and Herzegovina. North America shows even higher consistency between Canada (6.2%) and the United States (7.8%). For individual countries, Lebanon, Madagascar, and Vietnam report the highest established business rate overall with readings of 33.2%, 29.4% and 24.7% respectively. The lowest readings are reported by Qatar at 1.3%, Mexico and Bosnia and Herzegovina, at 1.4%, and Puerto Rico, at 1.6%. The magnitude of the imbalance implies that there are likely to be problems with the sustainability of start-ups caused possibly by limiting factors in the entrepreneurial environment – for more detailed information on regional perspective of the established business rates see **Table 3, Part 3**.

1.3.3 Business discontinuance

Business discontinuance rates in the factor- and efficiency-driven economies are on a par with one another, at 5.4% each, while discontinuance rates among the innovation-driven economies are 3.6%. A lack of business profitability is consistently cited as the major reason for business discontinuance, not only in 2017, but also in 2015 and 2016.

From all businesses that were discontinued, lack of profitability in efficiency-driven countries was cited in 38.7% of cases, in the innovation-driven countries at 26.4%, and in the factor-driven countries, at 21.6% (see **Figure 12**). Discontinuance rates because of a lack of profitability are particularly high in Lebanon (70.9%), Bulgaria (58.8%), and Brazil (57.0%) (see **Table 4, Part 3**).

From a regional perspective (see **Table 4, Part 3**), for entrepreneurs in Africa the primary reason for discontinuance is lack of profitability (40.6%). For entrepreneurs in Asia and Oceania, the common reasons for discontinuance is a lack of profitability (29.5%), personal reasons (17.3%), and problems with financing (17.2%). For entrepreneurs in Latin America and the Caribbean, the main reasons are lack of profitability (40.6%), personal reasons (21.6%), and problems with financing the venture (10.9%). For entrepreneurs in Europe, the main reasons are lack of profitability (29.6%), personal reasons (18.4%), and problems with financing (12.2%). For North American entrepreneurs, the reasons are the pursuit of another opportunity (21.9%) and personal reasons (17.4%). In Egypt, more than a tenth of adults aged between 18 and 64 years has discontinued a business in 2017. The same applies to Thailand and the United Arab Emirates, with a 9.2% business discontinuance rate. These are the highest-ranking countries with regard to business discontinuance among all GEM countries in 2017 (see **Table 3, Part 3**).

For national policy makers, it may be beneficial to determine the main reasons for discontinuance in each country. For example, in Indonesia and India, problems with financing were cited as the main reason for discontinuance, at 39.5% and 37.9% respectively. The United Arab Emirates, selling the business was given as the main reason for discontinuance (31.1%). **Part 3, Table 4** lists the reasons for business discontinuance by economy and region.

1.3.4 Entrepreneurial employee activity (EEA)

Entrepreneurial employee activity (EEA) is essential for business sustainability and renewal through the successful introduction of new product, services or setting up a new business. The EEA rates are substantially higher in innovation-driven economies in comparison with factor-driven and efficiency-driven economies (5.1% compared to 1.4% and 1.9% respectively, **Figure 9**). The lowest, almost negligible EEA rates are in the regions of Africa and Latin America and Caribbean, at 0.9% and 1.6% respectively. The highest EEA rates are reported in North America at 7.9%, followed by Europe at 4.4%, and Asia and Oceania at 3.1% (see **Table 3, Part 3**).

In seven economies in four different regions, half of a percent or less of the adult population is engaged in EEA. These economies are Morocco (0.5%), South Africa (0.5%), India (0.2%), Ecuador (0.5%), Panama (0.2%), Bosnia and Herzegovina (0.5%), and Bulgaria (0.5%). The following countries led in EEA: Estonia with 9.1%, Israel, with 8.6%, Canada with 8.2%, and Taiwan with 8.1% (see **Table 3, Part 3**).

Figure 12: Development phase averages for business discontinuation reason for 54 economies, GEM 2017 – percentage of the adult population that discontinued a business

1.4 IMPACT OF ENTREPRENEURIAL ACTIVITY

Entrepreneurial activity has interlinked sociological and economic contributions to society. This is made possible through different sets of indicators (societal values, individual attributes and entrepreneurial activity in which a special attention is given to job creation, the level of innovation and industry sector participation).

1.4.1 Job creation expectations

Job creation is a key instrument for achieving sustainable and inclusive growth needed to generate national wealth and reduce poverty. GEM asks early-stage entrepreneurs how many employees (other than the owners) they currently have and expect to have in the next five years. The difference between current and expected employees indicates growth expectations (see **Figure 13**).

Job expectation patterns in efficiency-driven and innovation-driven economies in 2017 are almost the same as in 2016, but in factor-driven economies expectations significantly worsened. Comparing those economies participating in 2016-2017 (India, Iran and Kazakhstan) there is an increase of those who do not expect job creation (55% in 2017 vs. 47% 2016) and at the same time a decrease of those who expect job creation of 1-5 jobs (21% in 2017 vs. 30% in 2016). Generally, the expectation for medium to high growth in the number of jobs is higher in efficiency-driven countries—at 18.6%—and highest in the innovation-driven countries at 22.2%.

The high levels of entrepreneurs across all development phases with no future hiring expectations, and especially increasing number of such entrepreneurs in factor-driven economies, requires serious attention of policy makers in identifying constraints: rigid labor regulations, poor availability of skilled educated labor, and limited access to entrepreneurial finance. Such constraints may deter entrepreneurs from attempting to grow their ventures measured by new employment. It should be noted that applied business models which are emerging from implementation of the digital technology may enable entrepreneurs to operate on their own, or with fewer employees, as it was some years ago.

The region with the highest proportion of entrepreneurs expecting medium to high job-creation opportunities is North America (29.5%). The United States, in particular, stands out with 38.6% of entrepreneurs expecting to generate more than six jobs. North America is followed by Asia and Oceania at 21.0%, Europe at 18.5%, Latin America and the Caribbean at 18.0% and Africa at 17.0%. (see **Table 6, Part 3**)

Variations within regions and development stages are the least in the category of entrepreneurs that do not expect to create any new job, but in categories of entrepreneurs that expect to create jobs, variations are very visible. For policy makers it should be of interest to look why such variations exist in the group of economies belonging to the same development stage. For example, entrepreneurs expecting to create 1 to 5 jobs in next five years vary in their expectations in factor-driven economies from 7% in Kazakhstan to 35% in Madagascar; in efficiency-driven

Figure 13: Development phase averages for employment expectations in the next five years (as % of TEA) in 54 economies, GEM 2017.

New York City, United States of America.

economies from 23% in China to 62% in Mexico, and in innovation-driven economies from 17% in Qatar to 50% in Puerto Rico. In the category of entrepreneurs expecting to create 6 or more jobs in next five years, variations are present in all three development stages: in factor-driven economies from 1% in Madagascar to 25% in Kazakhstan; in efficiency-driven economies from 2% in Bosnia and Herzegovina to 38% in Colombia and in innovation-driven economies from 6% in Sweden to 43% in Taiwan.

From a policy -making point of view, it is important to institute policies, processes, regulations, training and education aimed specifically at supporting those entrepreneurs with viable medium-to-high growth aspirations in order to optimize their impact on economic growth and job creation. Most economic think-tanks around the world stress the need for human-centric economic development, the goal of which is the increase in sustainable and equitable welfare for a country’s population, which is in line with UN Sustainable Development Goals. The human-centric concept provides support for entrepreneurship and self-employment as important drivers of new job creation.

1.4.2 Innovation

The concepts of innovation and entrepreneurship are closely connected to one another. Entrepreneurs disrupt market equilibrium by introducing new product-market combinations into a market, better fulfilling the needs of consumers as well as the environment, and driving out less productive firms as their innovations advance the production frontier. GEM assesses innovation in entrepreneurial activities by looking at the extent to which entrepreneurs are introducing products that are new to some or all customers, and that are offered by few or no competitors. As can be expected, average innovation levels increase with economic development level, or said differently, more intensive innovation activities contribute to higher competitiveness which leads to sustainable development measured by GDP per capita. Entrepreneurs in innovation-driven economies are considerably more innovative, with a third (31.2%) regarding their products as

Figure 14: Development phase averages for innovation levels (percentage of TEA with product new to all and no competitors) in 54 economies, GEM 2017

new to the market and within their respective industries, followed by 23.1% of entrepreneurs with innovative products in efficiency-driven economies and 21.0% in factor-driven economies (see **Figure 14**). Compared to 2016, such proportions of innovative entrepreneurs stay unchanged in 2017.

There are several reasons for the consistent finding that innovation levels tend to be linked to economic development level. More developed economies tend to have higher levels of protection of intellectual property, and academic education is more readily available. Furthermore, a higher proportion of the workforce participates in sophisticated industry sectors, such as information and communication technology (ICT), as well as professional and other service industries. Coupled with greater access to advanced technologies, this may encourage entrepreneurs to be more innovative.

At a regional level, innovation intensity is lowest in Latin America and the Caribbean (22.9%) and highest in North America (39.6%) (see **Table 7, Part 3**). However, within the individual economies, the highest innovation levels are reported by Luxemburg at 57.1%, Chile at 54.0%, and France, at 48.6%. Chile and Luxembourg maintained their leading positions in this category since last year; France advanced. The lowest innovation rates are measured in Panama at 8.5%, Bosnia and Herzegovina at 10.9% and Indonesia at 11.6%. Several economies show an encouraging trend of relatively high TEA rates coupled with robust levels of innovation. Lebanon is a relevant case in this respect, ranked fourth overall in the GEM sample for both TEA and innovation levels (and ranked first for established business ownership rate).

1.4.3 Industry sector participation

Entrepreneurship disrupts most industrial sectors, forcing significant changes in product and service offerings, new logistics processes, and new business models. Thus, the degree of entrepreneurs' participation in various industries is of importance. GEM tracks entrepreneurs the world over in a variety of industries, striving to assess the intensity of entrepreneurship activity measured by early entrepreneurial activity (TEA) in the top ten industries, which are then clustered in five groups (see **Figure 15**).

The economic structures of countries and the development

Figure 15: Development phase averages for TEA by industry sector in 54 economies, GEM 2017

stages are mutually dependent. The most prevalent industry sectors in the factor-driven economies are wholesale/retail (55%), ICT, financial and other services (22%), and agriculture (13%). In the efficiency-driven economies wholesale/retail (51%) and ICT, financial and other services (26%) are followed by manufacturing (13%). Economic structure of the innovation-driven economies is different: the most prevalent entrepreneurial activity is in ICT, financial and other services (50%), followed by wholesale/retail (31%) and manufacturing (10%). The differences in prevalent entrepreneurial activities in specific sectors reflect the changes in the relative contributions of each industry sector in each stage of the country's economic development.

From a regional perspective (see **Table 10, Part 3**), the region of Latin America and the Caribbean reports the highest level of wholesale/retail activity among early-stage entrepreneurs at 55.7%, with North America and Europe reporting the least TEA activities in this sector (21.6% vs. 27.0%, respectively). The highest early-stage entrepreneurial activity in ICT, financial and other services is observed in North America region (60.8%) and Europe (48.3%), and the least in Africa (15.5%). In the manufacturing sector, entrepreneurship activity in Europe is higher than in North America, 8.3% as opposed to 6.2%. Africa (12.6%) and Europe (7.1%) have the highest number of entrepreneurs in the agricultural sector, compared to less than 5% in the other three regions (see **Part 3, Table 10** for results on entrepreneurship activity in various industry sectors, presented by economy and region). Industry profiles across the individual economies highlights the diversity of entrepreneurship at both regional and developmental levels.

On a country level, the wholesale/retail industry exhibits intense entrepreneurial activity in Malaysia (78.4%), Vietnam (76.1%), and Indonesia (69.6%). The Netherlands (11.8%), Israel (11.1%), and the United Kingdom (9.6%) lead entrepreneurship activity in the ITC sector. Entrepreneurial activity in the financial sector is led by Japan (14.4%), USA (9.3%), and Switzerland (9.2%). Sweden, Canada, and Italy report 20% of entrepreneurial activity in professional services. Croatia, Qatar and Slovenia report a high rate of entrepreneurial activity in administrative services at 12.9%, 12.7% and 10.7% respectively. Sweden, France and Cyprus lead in entrepreneurial activity in personal/consumer services at 8.8%, 7.4% and 6.6%, respectively. Switzerland leads in health, education, government and social services at 33.8%, followed by Kazakhstan (27.7%), Germany (25.9%) and the Netherlands (25.9%).

1.5 MAIN INSIGHTS AND RECOMMENDATIONS

1.5.1 Preamble

The 2017/2018 Global Entrepreneurship Monitor (GEM) survey and report marks the end of two decades in which it has been involved in assessing the multi-faceted phenomena of entrepreneurship. It has explored entrepreneurship eco-systems the world over and annually provided primary data on a variety of measurements across multiple phases of entrepreneurial activity, assessed the characteristics, motivations and ambitions of entrepreneurs, and explored the attitudes societies have towards this activity. This report includes results based on fifty four world economies, completing the Adult Population Survey (APS) (individuals between the ages of 18 and 64 years) and the National Expert Survey (NES). GEM countries surveyed in 2017 comprise about 68% of the world's population and 86% of the world's GDP.

Based on the findings of the GEM 2017/2018 report, it is possible to make a number of globally relevant and current observations and recommendations for various stakeholders: policy decision makers, entrepreneurs and Small and Medium Size Enterprises (SMEs), larger

corporations, academic and educational institutions, international organizations and civil society. The following main insights and recommendations expect to encourage discussion and further analysis of the phenomena of entrepreneurship, innovation, economic growth, social development and corporate renewal.

1.5.2 Main insights

This year's survey unveils encouraging signs of improvement in the entrepreneurial framework conditions, what are an important contributor to building a stimulating environment for people with entrepreneurial intentions and activities. The following observations emerge from the 2017 GEM survey results:

- Improvements in 2017 compared to 2016 are observed in eight components (including access to finance, relevance of government policies, R&D transfer, government programs...) in both factor- and efficiency-driven economies and four in innovation-driven economies. Two components (entrepreneurship education at school stage and internal market dynamics) have shown an improvement in all three economic group averages. It is important to note that those improvements

Commercial area of Bangkok, Thailand.

The old town area of Hvar, Croatia.

- levelled the quality of entrepreneurship eco-system in factor- and efficiency-driven economies to innovation-driven economies. Despite these improvements, there are three components which still have a more hindering than stimulating role in supporting entrepreneurship activities: entrepreneurship education at school stage, government policies toward taxation and bureaucracy and R&D transfer.
- Societal values and self-perceptions about entrepreneurship are relatively stable over time, but factor-driven economies report a slight increase when referring to entrepreneurship as a good career choice and in fear of failure. These observations call for more focused interventions primarily in the educational sector, which is identified as one of the weakest component of the entrepreneurial environment worldwide.
- In the factor-driven economies, the proportion of improvement-driven opportunity entrepreneurs, as opposed to necessity-driven entrepreneurs, has doubled since 2016, indicating a change regarding the nature of entrepreneurship in these economies.
- In 2017 changes have been observed in the level of job creation expectations - there has been an increase in those entrepreneurs who do not expect to create any jobs in factor-driven economies compared to 2016. This change is accompanied by a sharp decrease of those with 1-5 job creation expectations. Job expectation is an important signal to governments to analyze their policies and programs related to the entrepreneurial environment in which people with entrepreneurial intentions and entrepreneurs function. This information is also a call to actors in R&D transfer (without new products/services the competitive edge decreases and this in turn influences job creation expectations).

The various stakeholders should consider this GEM 2017/2018 report's findings as a tool to firstly, identify benchmarks regarding the relevant eco-system to facilitate entrepreneurship, innovation, economic growth and corporate renewal and secondly, to inquire further into best practices around the world that should be adopted through policy decision making, policy implementation and policy monitoring processes.

1.5.3 Main Recommendations

The following provides recommendations that are based on the GEM 2017/2018 survey. The recommendations are presented as per the main stakeholders of the entrepreneurial framework conditions.

- **Policy decision makers**

Develop policies, rules and regulations that allow for the rapid evolution of an appropriate entrepreneurial environment (taxation schemes that support new businesses and SMEs; reduce the burden of bureaucracy at the national, regional, municipal and city level; introduce programs in support of entrepreneurs in high growth, high impact, export-oriented industrial sectors; monitor the effective implementation of government policies, as a basis for their continual improvement).

Develop appropriate budgets for government agencies that foster innovation and development of new industrial sectors.

Identify regions and countries that may be used as benchmarks and contextualize follow their best practices of what they do in their entrepreneurial environment.

Provide mentoring mechanisms for nascent business from their inception including entrepreneurial greenhouses.

Introduce mechanisms to reduce gender and minority gaps by providing an inclusive entrepreneurial environment.

Encourage “angels” investments by allowing for a complete and immediate write-off of invested capital against commitment for a multi-year, staggered, investments in new ventures.

Increase the awareness of government programs to support entrepreneurs through media campaigns and web based networks.

- **Business sector (Entrepreneurs, Small and Medium Size Enterprises (SMEs), larger businesses, business associations)**

Become familiar with the various government and non-government agencies that support entrepreneurs and SMEs. At times a “pull” approach is more effective than a “push” approach.

Create a social network that serves as a mentoring, consulting or advisory group to assist in all the business aspects. This is of particular importance to younger entrepreneurs and women entrepreneurs, as indicated in the GEM 2017/2018 survey.

Leverage digital technology to create new products, services and business models.

Leverage digital technology to initiate aggressive export campaign for products and services. “Born global” industries are flourishing using these digital platforms.

Introduce innovation in existing, traditional businesses through employee entrepreneurship activities (EEA), improve productivity and foster excellence in manufacturing and service industries. Support experimentation by employees, following W. Edwards Deming’ adage “Drive out fear, so that everyone may work effectively for the company”

Create voluntary forums to initiate industry wide. As an example, GS1 (Global Standards 1) (<https://www.gs1.org/>) is a not-for-profit organisation that develops and maintains global standards for business communication (such as barcodes). GS1 has over a hundred local member organisations and 1.5 million user corporations.

Venture into new, high growth industries by encouraging innovative products, services and by using new business models.

Allow for Life Long Learning (LLL), or paid continuing education, of employees in areas that may lead them to become innovators and change leaders.

- **Academic and educational institutions**

Develop entrepreneurship programs at the school stage and post-secondary educational institutions.

Create new co-op educational programs/internship programs that involve the students in entrepreneurial activities throughout the program of study.

Enrich each one of the traditional academic disciplines with a mandatory minor curriculum in digital and digital platform creation skills.

Support research in the areas of entrepreneurship, innovation, corporate renewal, business scaling-up.

Create youth entrepreneurship programs, for teenagers, at school age, using the mentorship of teachers, business executives and university students. These programs should be year-long, following a structured curriculum, simulating a true-to-life corporate modus operandi, including issuing shares, executive appointments, assignment of responsibilities and assessment of the business results by a professional panel of executives.

Many youth prefer to take no formal education at the university level but to acquire the skills necessary to start their new venture and become successful entrepreneurs, running sustainable business ventures, including export oriented, high growth businesses. Educational institutions and universities should consider providing Life Long Learning (LLL) curriculum that may be available on an as needed basis, short term and focused.

- **International organizations**

International organizations are in a position to use globally generated data, obtained through GEM 2017/2018 survey, to compare and contrast benchmarks related to their own global agenda and promote good practices worldwide.

The United Nations has defined seventeen sustainable goals <http://www.un.org/sustainabledevelopment/sustainable-development-goals/>. Progress towards some of these goals (No poverty, Quality education, Gender equality, Decent work and economic development) may be measured by using the GEM data. The UN goal of “Partnership for the goals” may be attained by using the cache of GEM’s harmonised data bases to identify relevant benchmarks and best practices in various regions and economies in the world for mutual learning.

OECD is already using GEM data in some of its publications, especially GEM data on cultural and societal values toward entrepreneurship, self-perception about capabilities to recognize opportunities, pursue a venture, intentions, fear of failure as well as a set of indicators related to entrepreneurship activity. OECD is also using GEM data to monitor aspects of inclusiveness (gender, youth, seniors).

World Economic Forum collaborates with GEM on analysing specific topics (like Europe’s Hidden Entrepreneurs: Entrepreneurial Employee Activity and Competitiveness in Europe; Leveraging Entrepreneurial Ambition and Innovation: A Global Perspective on Entrepreneurship, Competitiveness and Development).

- **Civil society**

This GEM 2017/2018 report measures cultural and social norms that support or inhibit entrepreneurship. It is important to nurture a culture of successful failure - a failure that encourages learning from a failed experience.

Civil society may also help change stereotyping that hold back women entrepreneurs in certain regions, assist in creating the necessary support social networks and accessing needed venture capital.

Nascent Entrepreneurship Rate – Percentage of the adult population aged between 18 and 64 years that have started a business that is less than 4 months old and that has not paid salaries or wages

New Business Ownership Rate – Percentage of the adult population aged between 18 and 64 years that have started a business that is between 4 and 42 months old and is paying salaries or wages

Total Early-stage Entrepreneurial Activity – TEA - Percentage of the adult population between the ages of 18 and 64 years who are in the process of starting a business or already started a business (a nascent entrepreneur or owner-manager of a new business) which is less than 42 months old.

Entrepreneurial Employee Activity – EEA – Percentage of the adult population aged 18 to 64 years who as employees have been involved in entrepreneurial activities such as developing or launching new goods or services, or setting up a new business unit, a new establishment or subsidiary.

Established Business Ownership Rate – EB –Percentage of the adult population aged between 18 and 64 years who are currently an owner manager of an established business, i.e. owning and managing a running business that has paid salaries, wages or any other payments to the owners for more than 42 months.

Discontinuation of Businesses – Percentage of the adult population aged between 18 and 64 years that have discontinued a business in the past 12 months, either by selling, shutting down or otherwise discontinuing an owner/management relationship with the business

T – indicates that the ranking is the same for two or more economies.

Necessity-driven – Percentage of TEA of the adult population aged 18 - 64 years old who have started a business out of necessity because they have no other option

Opportunity-driven – Percentage of TEA of the adult population aged 18 - 64 years old who have started a business out of an opportunity

Motivation index – The ratio between improvement-driven opportunity TEA and necessity-driven TEA

T – indicates that the ranking is the same for two or more economies.

1 Entrepreneurial finance

2a Government policies: support and relevance

2b Government policies: taxes and bureaucracy

3 Government entrepreneurship programs

4a Entrepreneurial education at school stage

4b Entrepreneurial education at post school stage

5 R&D Transfer

6 Commercial and legal infrastructure

7a Internal market dynamics

7b Internal market burdens or entry regulation

8 Physical infrastructures

9 Cultural and social norms

Development stages:

1 = factor driven and transition to efficiency-driven

2 = efficiency-driven and transition to innovation-driven

3 = innovation-driven
