Regardless of job function, executives at every level need an understanding of financial fundamentals in order for organizations to survive and thrive in today’s fast-paced, ever-evolving global economy. It is no longer practical to leave financial acumen to the finance department.

Finance for Today's Nonfinancial Professionals bridges the gap between functional business knowledge and practical financial information. By connecting a company’s strategy to its financial implications, the value of an organization increases and its business leaders become more effective.
Building a Strategic Understanding

Finance is the language of business. This hands-on program presents and explains data in practical, real-world terms, giving participants the functional financial knowledge needed to create better solutions to company challenges, improve interdepartmental communication, take on more strategic responsibility, and create new opportunities for their organizations.

In addition to increasing their understanding of essential financial tools, participants gain insights that put their organization’s strategy into financial terms, empowering them to collaborate with financial colleagues for better decision making.

Dynamic Classroom Environment

The curriculum explores finance through the unique dynamics of participants’ industries and organizations. Participants learn to read actual financial statements and immediately apply that information in ways that are relevant to their jobs.

Follow-up analysis and consultation help participants understand financial positions and implications at the department and enterprise level, and make strategic decisions based off this knowledge.
YOUR WORLD, YOUR FINANCE

Every industry has specific financial metrics that matter more than others. This program helps participants identify the financial metrics important to their organizations, and gives them the financial tools they need to increase their opportunities and successes.

In an interactive setting made up of peers from a variety of industries, participants will learn to:

- Read and leverage financial reports and data, including balance sheets, income statements, and cash flow statements
- Assess profitability and costs of projects, products, innovations, and initiatives to make better investment decisions
- Use financial knowledge to improve planning, budgeting, and valuation
- Understand the financial language and communicate with financial colleagues to gain insight into organizational performance

EXPERIENCE THE BABSON ADVANTAGE

Babson Executive Education faculty members are more than thought leaders; they are pragmatic practitioners who understand the best way to learn is by doing. Participants practice real-world financial decision making through instruction, collaboration, and interaction with peers as they work with actual financial statements.

WHO LEADS THE PROGRAM?

Victoria L. Sassine is an adjunct lecturer in the Finance Division at Babson College. Her expertise is in corporate finance, corporate strategy, and practical applications of financial tools. She has worked in strategic financial management positions in a variety of industries including biotechnology (Biogen Idec), consumer products (Kraft Foods, Phillip Morris) and petrochemical (Royal Dutch Shell Oil). She teaches Strategic Corporate Finance and Option Theory at the graduate level, and various courses at Babson Executive Education. She also serves on the boards of several nonprofit organizations. She earned her BSBA from Kansas State University, her MBA from the University of Chicago, and is a CPA.

Robert M. Turner is an associate professor of accounting and the assistant vice president for enrollment at Babson College. He previously taught at Boston College, Boston University, and Le Moyne College. His teaching interests are in the area of corporate and not-for-profit financial reporting, and he has taught financial accounting at the undergraduate and graduate levels. Turner has published numerous articles on financial reporting, primarily in the areas of reporting by not-for-profit organizations, and accounting education. He is active in providing professional development programs nationally for public accounting firms and also teaches programs for corporations and firms, including Fidelity, Eaton Vance, and EMC.
