Chad	Guyana	Moldova	Sao Tome and Principe	Venezuela ( <i>Bolivarian Republic of</i> )
China	Haiti		Senegal	Vietnam
China, <i>Hong Kong SAR</i>	Honduras		Sierra Leone	Yemen, <i>Rep.</i>
China, <i>Macao SAR</i>	India			Zambia
				Zimbabwe

Source: World Health Organization, *Global Tuberculosis Report (2021)*. Incidence of Tuberculosis ( $\geq 20$  per 100,000 people).

Have you had frequent or prolonged visits\* to one or more of the countries or territories listed above with a high prevalence of TB disease? (If yes, CHECK the countries or territories, above)  Yes  No

Have you been a resident and/or employee of high-risk congregate settings (e.g., correctional facilities, long-term care facilities, and homeless shelters)?  Yes  No

Have you been a volunteer or health care worker who served clients who are at increased risk for active TB disease?  Yes  No

Have you ever been a member of any of the following groups that may have an increased incidence of latent *M. tuberculosis* infection or active TB disease: medically underserved, low-income, or abusing drugs or alcohol?  Yes  No

**If the answer is YES to any of the above questions**, Babson College/Olin College requires that you receive TB testing as soon as possible, but should take place **no sooner than six months prior to the start of your first semester**. Please have your doctor complete and sign the TB Clinical Assessment on pages 2 and 3 including documentation of testing as directed.

**If the answer to all of the above questions is NO**, no further testing or further action is required.

\* The significance of the travel exposure should be discussed with a health care provider and evaluated

M D Y

**Part III. Management of Positive TST or IGRA**

All students with a positive TST or IGRA with no signs of active disease on chest x-ray should receive a recommendation to be treated for latent TB with appropriate medication. However, students in the following groups are at increased risk of progression from LTBI to TB disease and should be prioritized to begin treatment as soon as possible.

- Infected with HIV
- Recently infected with *M. tuberculosis* (within the past 2 years)
- History of untreated or inadequately treated TB disease, including persons with fibrotic changes on chest radiograph consistent with prior TB disease
- Receiving immunosuppressive therapy such as tumor necrosis factor-alpha (TNF) antagonists, systemic corticosteroids equivalent to/greater than 15 mg of prednisone per day, or immunosuppressive drug therapy following organ transplantation
- Diagnosed with silicosis, diabetes mellitus, chronic renal failure, leukemia, or cancer of the head, neck, or lung
- Have had a gastrectomy or jejunioileal bypass
- Weigh less than 90% of their ideal body weight
- Cigarette smokers and persons who abuse drugs and/or alcohol
